

BUSINESS IMPACT

Clean water and sanitation

Ensure availability and sustainable management of water and sanitation for all through:

Benefits to society

Access to clean water and sanitation is a basic human right and is essential for reducing poverty and improving overall well-being. Not only is it vital for agriculture, biodiversity and economic growth, but also keeps children in school and increases opportunities for women and girls in rural areas.

Benefits to business

We have established expertise in funding and structuring infrastructure projects. We also partner with our clients to finance innovative water solutions which help communities and business growth. In our own operations, we continually look for opportunities to reduce our consumption and usage of water.

SDG 6.1: Safe and affordable drinking water

Solar water pumping systems provided to 11 rural communities in South Africa

Through our collaboration with the Entrepreneurship Development Trust (EDT), **Innovation Africa** provided solar water pumping systems to 11 communities in rural South Africa, in Mpumalanga and Limpopo. Approximately 20 000 litres per day of clean water are distributed to at least 8 000 people per village. The community takes ownership of the project, allowing local residents to be employed in the construction and maintenance of the project, supporting skills development and enhancing future employment prospects.

For more information visit www.innoafrica.org

Private Capital in South Africa is an equity partner in **Abeco Tanks**. Water is required for agriculture, business, industry and mining which are the pillars of our continent's developing economies. Abeco Tanks provides hygienic storage of water through their cost-effective water tank storage solutions which include elements of safety, hygiene, quality and durability. These water tanks that address the need for a convenient and stable water supply, have been installed in over 38 countries including Mauritius, Seychelles, Madagascar, Central America, Middle East as well as across the entire African continent.

Abeco Tanks supported municipalities across South Africa during the COVID-19 pandemic by providing 12 tanks valued at R5.4 million. The water tanks have enabled a reliable supply of water to communities to ensure that people are able to regularly wash their hands which plays a major role in curbing the spread of COVID-19.

Water tanks installed in >38 countries

SDG 6.4 Substantially increase water-use efficiency across all sectors

South Africa is a water-scarce country, requiring a dedicated focus on ensuring adequate water storage and transfer capacity. To this end, Trans-Caledon Tunnel Authority (TCTA), a state owned entity, designs bankable projects, raises funding in capital markets, manages debt and implements infrastructure rollouts.

Investec provided funding for TCTA, who also act as an agency of the National Department of Water and Sanitation, which is responsible for the country's water resources in respect of usage, equitable allocation and distribution. TCTA assists the government in ensuring water security for South Africa and universal access to this essential service for all citizens.
