Introduction

INTRODUCTION

Investec is a distinctive bank and wealth manager, driven by commitment to our core philosophies and values. We deliver exceptional service to our clients, striving to create long-term value for all our stakeholders and contributing meaningfully to our people, communities and planet.

The Investec distinction is embodied in our entrepreneurial culture, balanced by a strong risk management discipline, client-centric approach and an ability to be nimble, flexible and innovative. We do not seek to be all things to all people. Our aim is to build well-defined, value-adding businesses focused on serving the needs of select market niches where we can compete effectively.

Our unique positioning is reflected in our iconic brand, our high-tech and high-touch approach and our positive contribution to society, macro-economic stability and the environment. Ours is a culture that values innovative thinking and stimulates extraordinary performance. We take pride in our depth of leadership and we employ passionate, talented people who are empowered and committed to our mission and values.

During July 2002, Investec Group Limited (since renamed Investec Limited) implemented a dual listed companies (DLC) structure and listed its offshore business on the London Stock Exchange (LSE).

In terms of our DLC structure, Investec Limited is the holding company of our businesses in South Africa and Mauritius, and Investec plc is the holding company of our non-Southern African businesses. Investec Limited is listed on the Johannesburg Stock Exchange Limited (JSE) South Africa (since 1986) and Investec plc on the LSE (since 2002). Investec plc is a FTSE 250 company.

Investec plc and Investec Limited are separate legal entities, but are bound together by contractual agreements and mechanisms. Investec operates as a single unified economic enterprise where shareholders have common economic and voting interests. Creditors, however, are ring-fenced to either Investec plc or Investec Limited as there are no cross-guarantees between the companies.

Regulation and supervision

Investec plc is an approved United Kingdom (UK) Financial Holding Company (FHC). In line with the Capital Requirements Directive (CRD) V requirements and Capital Requirements Regulation (CRR) II amendments requiring FHC and Mixed FHC of Prudential Regulation Authority (PRA)-regulated subsidiaries to become approved holding companies, Investec plc applied in June 2021 for approval in accordance with Part 12B of the Financial Services and Markets Act 2000. The approval was effective 14 October 2021. Investec plc is now responsible for ensuring compliance with prudential requirements on a consolidated basis. Investec Bank plc, the main banking subsidiary of Investec plc, continues to be authorised by the PRA and regulated by the Financial Conduct Authority (FCA) and the PRA.

Investec plc calculates capital resources and requirements using the Basel 3 framework, as implemented in the European Union (EU) through the CRD IV, as amended by CRR II and CRD V. Following the end of the Brexit transitional period, the EU rules (including binding technical standards) have been onshored and now form part of domestic law in the UK by virtue of the European Union (Withdrawal) Act 2018.

Subsidiaries of Investec plc may be subject to additional regulations, as implemented in other relevant jurisdictions.

The Basel 3 framework is structured around three 'pillars' namely Pillar 1 minimum capital requirements, Pillar 2 supervisory review process and Pillar 3 market discipline. Pillar 3 aims to complement the other two pillars by developing a set of disclosure requirements that will allow market participants to gauge the capital adequacy of a firm.

Policy

The Pillar 3 disclosures in this document are prepared in accordance with the Disclosure (CRR) part of the PRA rulebook, effective 1 January 2022, at the Investec plc consolidated Group level, which includes Investec plc and its subsidiaries (the Group) and comprises both quantitative and qualitative information at 31 March 2023, with comparative figures for 31 March 2022 provided, where relevant.

During the year, Investec plc triggered the 'large institution' definition, with total assets for the consolidated Group exceeding the €30 billion threshold over two consecutive reporting quarters. Therefore, effective 30 September 2022, the Group has adopted quarterly Pillar 3 reporting.

Investec Bank plc (IBP), is the principal banking subsidiary of the Investec plc Group. IBP applies the provisions laid down in article 9 (solo-consolidation waiver) of the CRR and therefore includes Investec Investments (UK) Limited in the solo-consolidation. In accordance with article 13 and the Disclosure (CRR) Part of the PRA rulebook, a sub-set of Pillar disclosures covering own funds, capital requirements, countercyclical capital buffers, credit risk, remuneration, leverage ratio, liquidity requirements and credit risk mitigation techniques have to be published by significant subsidiaries of the Investec plc Group. The IBP disclosures which follow are published on an individual basis (i.e. solo-consolidation level) as at 31 March 2023, with comparative figures provided for 31 March 2022, where relevant. The sub-set of Pillar 3 disclosures for the Bank are included in appendix A.

The Pillar 3 disclosures are published in a standalone disclosure report and are available to view on the Investec website at www.investec.com. These disclosures are published annually and are released, simultaneously with the Annual Report. The Pillar 3 disclosures of the Group are governed by the Investec plc Pillar 3 disclosure policy, which is approved by the DLC Board Risk and Capital Committee (DLC BRCC), a delegated sub-committee of the Investec plc Board. The Board delegates responsibility for review and approval of these disclosures to a sub-committee of the DLC BRCC.

The Pillar 3 disclosures of the Bank are governed by the IBP Pillar 3 disclosure policy, which is approved by the IBP Board Risk and Capital Committee (IBP BRCC), a delegated sub-committee of the IBP Board. The Board delegates responsibility for review and approval of these disclosures to a sub-committee of the IBP BRCC.

Where Pillar 3 requirements are included in other disclosure reports, references are provided to the relevant pages and or location of these reports. Remuneration disclosures for the Investec plc Group, including qualitative and quantitative disclosures, are included in the Investec Group's 2023 remuneration report. The remuneration disclosures for IBP are included in the IBP Annual Report 2023 on pages 92 to 104.

INTRODUCTION
CONTINUED

Philosophy and approach to capital and liquidity

Investec plc has maintained a conservative approach to capital and liquidity for many years, long before many of the regulations came into effect. The Group holds capital in excess of regulatory requirements and remains well capitalised. At 31 March 2023, the Common Equity Tier (CET1) ratio of the Group was 11.7%. As Investec plc is on the Standardised Approach (SA), our risk weighted assets (RWAs) represent a large portion of our total assets. As a result, we inherently hold more capital than firms who apply the Advanced Internal Ratings-Based Approach.

The Group has never required shareholder or government support throughout the COVID-19 pandemic and retains one of the highest leverage ratios amongst its peers, whilst meeting the Basel 3 liquidity requirements for some time. The leverage ratio, calculated as regulatory capital over regulatory balance sheet assets for the Group, was 9.2% at 31 March 2023.

Cohesive liquidity management is vital for protecting our depositors, preserving market confidence, safeguarding our

reputation and ensuring sustainable growth with established funding sources. Through active liquidity management, we seek to preserve stable, reliable and cost-effective sources of funding. As such, the Group considers ongoing access to appropriate liquidity for all its operations to be of paramount importance, and our core liquidity philosophy is reflected in day-to-day practices.

We carry a high level of liquidity in all our banking subsidiaries in order to be able to cope with shocks to the system, targeting a minimum cash to customer deposit ratio of 25%.

Total cash and near cash balances for the Group amounted to £8.6 billion at 31 March 2023 representing 44.7% of customer deposits.

At 31 March 2023 the Group's point in time Liquidity Coverage Ratio (LCR) was 411% and the Net Stable Funding Ratio (NSFR) was 143%, well above the minimum regulatory minimum of 100%. The LCR ratio disclosed in the table below reflects the 12-month average ratio.

[^] The references identify the lines prescribed in the PRA template. Only applicable lines with assigned values are reported. All other lines have been suppressed.^{^^} The leverage ratios are calculated on an end-quarter basis, applying the UK leverage ratio framework which applies to all UK firms from 1 January 2022.^{*} Line 12 CET1 available after meeting the total SREP own funds requirements (%) is equal to CET1 ratio (line 5) minus total SREP own funds requirements (line UK 7d).^{**} The LCR ratio disclosed in this table is the 12-month average ratio.

INTRODUCTION
CONTINUED

Minimum capital requirements

The Group's minimum CET1 requirement at 31 March 2023 is 7.9% comprising a 4.5% Pillar 1 minimum requirement, a 2.5% Capital Conservation Buffer (CCB), a 0.31% Pillar 2A requirement and a 0.63% Countercyclical Capital Buffer (CCyB). The Group's institution-specific CCyB requirement is calculated based on the relevant exposures held in jurisdictions in which a buffer rate has been set. As at 31 March 2023 the UK CCyB rate is 1%.

Regulatory developments

On 30 November 2022, the PRA published a consultation paper on the Implementation of the Basel 3.1 standards, which set out the proposed rules and expectations that cover parts of the Basel 3 standards that remain to be implemented in the UK and relate to the calculation of RWAs. The rule changes are expected to take effect from 1 January 2025. The Basel 3.1 standards aim to restore credibility in risk-weighted ratios, by introducing more robust and risk-sensitive Standardised Approaches, whilst curtailing the RWA benefits Internal Models can provide. The proposals aim to advance the PRA's primary objective to promote the safety and soundness of the firms that it regulates. By improving the measurement of risk, the PRA are of the view that it will help ensure firms are adequately capitalised given the risks they are exposed to. Whilst the PRA are proposing limited adjustments to the international standards in order to adhere to the global reforms, they have proposed the removal of several onshored EU discretions, such as the small and medium-sized enterprise (SME) supporting factor. The consultation closed for comment on 31 March 2023.

On 12 December 2022, the Financial Policy Committee (FPC) increased the UK CCyB rate from 0% to 1%. On 5 July 2022, the FPC announced that it is further increasing the UK CCyB rate from 1% to 2%, with effect from 5 July 2023. From the FPC meetings held on 28 November 2022, 8 December 2022 and 23 March 2023 the FPC noted that, despite the global and UK economic outlooks having deteriorated and financial conditions having tightened, the UK banking system can absorb the impact of the expected weakening in the economic situation while continuing to meet credit demand from creditworthy households and businesses. The FPC therefore confirmed they will be maintaining the UK CCyB rate at 2% (effective 5 July 2023).

On 12 October 2022 the PRA published consultation paper 12/22 on risks from contingent leverage which is when a firm can no longer rely on capital-efficient forms of financing, such as in a stress scenario, leading to a fall in the leverage ratio. The consultation proposes amendments to supervisory statement 31/15 (Internal Capital Adequacy Assessment Process (ICAAP) and the Supervisory Review and Evaluation Process (SREP)) and, for firms in scope of the UK Leverage Ratio Framework, additional reporting requirements which are to be effective from 1 July 2023. Also, from 1 January 2023 the UK Leverage Ratio Framework expanded to include firms which have equal or greater than £10 billion non-UK assets. Investec plc and Investec Bank plc remain

out of scope of the UK Leverage Ratio Framework and will not be subject to the additional reporting requirements for contingent leverage but, subject to a supervisory expectation to manage excessive leverage above 3.25%.

Current regulatory framework

In the UK, banks are required to meet minimum capital requirements as prescribed by CRD IV for Pillar 1, namely a CET1 capital requirement of 4.5% of RWAs, a Tier 1 (T1) capital requirement of 6% of RWAs and a Total Capital (TC) requirement of 8% of RWAs. In addition, banks are required to meet their Pillar 2A total capital requirement, as determined by the SREP, with at least 56.25% CET1 capital.

The PRA buffer, which is also determined as part of the SREP, must be supported with CET1 capital.

UK firms are required to meet a combined buffer requirement, which is in addition to the Pillar 1 and Pillar 2A capital requirements. The combined buffer includes the CCB and the CCyB and must be met with CET1 capital. The buffer for global systemically important institutions and the systemic risk buffer do not apply to Investec plc and will not be included in the combined buffer requirement.

As at 31 March 2023, Investec plc holds a CCB of 2.5% and an institution specific CCyB of 0.63% of RWAs. The Group's institution specific CCyB requirement is calculated based on the relevant exposures held in jurisdictions in which a buffer rate has been set.

The Group continues to hold capital in excess of all regulatory capital and buffer requirements.

The Group applies the SA to calculate credit risk, counterparty credit risk (CCR), securitisation risk, operational risk and market risk capital requirements.

In October 2021, the FPC and the PRA confirmed the new UK leverage ratio framework will apply from 1 January 2022 and the existing leverage ratio parts of the UK CRR would be revoked. Investec plc is not subject to the minimum leverage ratio requirement of 3.25%, but is subject to a "supervisory expectation" to manage excessive leverage by ensuring the leverage ratio does not fall below 3.25%. For simplicity, the same leverage ratio exposure measure and capital measure will now apply to all UK banks (including the exemption of central bank reserves and will reflect updated international standards). These changes are reflected in our disclosures.

Subsidiaries of Investec plc may be subject to additional regulations as implemented by local regulators in other relevant jurisdictions. Where capital is a relevant consideration, management within each regulated entity pays close attention to prevailing local regulatory rules as determined by their respective regulators. For capital management purposes, it is the prevailing rules applied to the consolidated Investec plc Group that are monitored closely. With the support of the Group's prudential advisory and reporting team, local management of each regulated entity ensures that capital remains prudently above minimum regulatory requirements at all times.

INTRODUCTION
CONTINUED

Capital and leverage ratio targets

Capital

Over recent years, capital adequacy standards for banks have been raised as part of attempts to increase the stability and resilience of the global banking sector. The Group has always held capital in excess of regulatory requirements and continues to remain well capitalised. Accordingly, Investec targets a minimum CET1 capital ratio of above 10%, a T1 capital ratio of above 11% and a TC ratio target in the range of 14% to 17%. These targets are set on an Investec Group basis and exclude the deduction of foreseeable charges and dividends as required under the CRR. Although the targets are set on an Investec Group basis, they are monitored on a UK reported basis, including the impact of foreseeable charges and dividends. These targets are continuously assessed for appropriateness.

Leverage

The Group targets a leverage ratio above 6%.

Management of capital and leverage

Capital

The IBP, Investec plc and DLC Capital Committees are responsible for ensuring the impact of any regulatory change is analysed, understood and planned for. To allow these committees to carry out this function, the Bank's prudential advisory and reporting team closely monitor regulatory developments and regularly present to the committees on the latest developments and proposals. As part of any assessment, the committees are provided with analysis setting out the Group's capital adequacy position, taking into account the most up-to-date interpretation of the rule changes. In addition, regular sessions are held with IBP BRCC and DLC BRCC and the respective Boards to ensure members are kept up to date with the most salient changes and to ensure the impact on IBP and its subsidiaries is monitored and understood.

Leverage

As with the governance of capital management, the IBP, Investec plc and DLC Capital Committees are responsible for ensuring that the impact of any regulatory changes on the leverage ratio is calculated, analysed and understood at all reporting levels. The leverage exposure measure is calculated on a monthly and quarterly basis and is presented to these committees on a regular basis. These committees are also responsible for monitoring the risk of excessive leverage.

Basis of consolidation

The regulatory basis of consolidation differs from the basis of consolidation used for financial reporting purposes. The financial accounting position of the Group is reported under International Financial Reporting Standards (IFRS) and is described on page 64 of the Investec plc 2023 annual report.

The regulatory consolidation includes all financial sector subsidiaries, the majority of which are wholly-owned by the relevant parent company. Investments in financial sector associates are equity accounted in the financial accounting consolidation. In the regulatory consolidation, exposures to financial sector associates are proportionally consolidated. Subsidiaries and associates engaged in non-financial activities are excluded from the regulatory consolidation. In addition, special purpose entities (SPEs) are not consolidated for regulatory purposes, where significant credit risk has been transferred to third parties. The positions IBP continues to hold in these securitisation SPEs will either be risk weighted and/or deducted from CET1 capital.

Table 3 reconciles the Group's financial accounting balance sheet to the regulatory scope balance sheet. The alphabetic references included in the reconciliation provide a mapping of the balance sheet items to elements included in the composition of regulatory own funds (UK CC1) table 6, set out on page 22.

Regulatory capital requirements are driven by the regulatory balance sheet and not the financial accounting balance sheet.

Other investments							
Ninety One Plc	Fair value investment				X		Investment Management Services
CFC Holdings Limited	Fair value investment		X				Holding company

[^] Exposures which are neither consolidated nor deducted are risk weighted, subject to qualifying holding thresholds or not included in the regulatory consolidation.

^{^^} Exposures which are deducted are subject to significant investment thresholds. Amounts above the threshold are deducted from CET1 capital, whilst amounts up to the threshold amount are risk weighted at 250%.

* The regulatory treatment of all entities listed as subsidiaries in the Investec plc 2023 Annual Report, pages 187 to 190, follows the accounting treatment unless otherwise stated in the table above.

** The regulatory treatment of all entities listed as Associates and Joint Ventures in the Investec plc 2023 annual report, page 191, do not align with the accounting treatment. In the regulatory consolidation, exposures to financial sector associates are proportionally consolidated.

Mapping of financial statement categories with regulatory risk categories

Table 4 shows how the financial statement categories map to the regulatory risk categories. The carrying value under the regulatory scope of consolidation will not equal the sum of the amounts reported in the regulatory risk categories as some exposures will attract both a CCR and market risk charge.

The regulatory risk categories are expanded further in table 4 to take into account the key differences between the regulatory exposure value and value reported in the financial statements.

Differences between the financial and regulatory exposure amounts

Table 5 sets out the main sources of differences between the regulatory exposure amount and the carrying values in the financial statements applying the regulatory scope of consolidation. The key differences are as follows:

- Off-balance sheet amounts and differences due to credit conversion factors – the regulatory exposure amount includes off-balance sheet exposure amounts which are subject to regulatory defined credit conversion factors (CCFs) depending on the maturity and type of exposure
- Differences in valuations – additional valuation adjustments are applied to banking book and trading book assets measured at fair value in order to reflect a prudent valuation. The Group applies the simplified approach when calculating additional valuation adjustments
- Netting rules – under IFRS, in order to net on an accounting basis, a legally enforceable right to set-off the recognised amounts must exist and the entity has the intention to settle the asset and liability on a net basis, or to realise the asset and settle the liability simultaneously. From a regulatory perspective, it is possible to recognise greater netting, provided the agreements are legally effective and enforceable, including in the event of the bankruptcy or insolvency of the counterparty and the exposures are monitored and controlled on a net basis
- Differences due to the use of credit risk mitigation techniques – the regulatory exposure takes into account eligible credit risk mitigation
- Other differences – this includes potential future exposure (PFE) add-ons arising on derivative exposures under the CCR framework, and the IFRS 9 transitional adjustment subject to a RW of 100%
- Market risk – the difference is driven by the standardised market risk methodology applied when calculating market risk capital requirements.

Risk management

RISK MANAGEMENT

Philosophy and approach to risk management

The Group's comprehensive risk management process involves identifying, quantifying, managing, monitoring, mitigating and reporting the risks associated with each of the businesses to ensure the risks remain within the stated risk appetite.

The Board ensures that there are appropriate resources to manage the risks arising from running our businesses.

The DLC Board Risk and Capital Committee (DLC BRCC) (comprising both Executive and Non-Executive Directors) is the Board mandated committee to monitor and oversee risk. DLC BRCC meets at least five times per annum and recommends the overall risk appetite for the Investec Group to the Board for approval.

We monitor and control risk exposure through independent credit, market, liquidity, operational, legal, internal audit, capital and compliance teams. This approach is core to assuming a tolerable risk and reward profile, helping us to pursue controlled growth across our business.

Group risk management operates within an integrated but geographical and divisional structure, in line with our management approach, ensuring that the appropriate processes are used to address all risks across the Group.

There are specialist divisions in the UK and South Africa and smaller risk divisions in other regions tasked with promoting sound risk management practices.

Risk management units are locally responsive yet globally aware. This helps to ensure that all initiatives and businesses operate within our defined risk parameters and objectives. We continually seek new ways to enhance risk management techniques.

We believe that the risk management systems and processes we have in place are adequate to support the Group's strategy and allow the Group to operate within its risk appetite tolerance.

Group risk management objectives are to:

- Ensure adherence to our risk management culture
- Support the long-term sustainability of the Group by providing an established, independent framework for identifying, evaluating, monitoring and mitigating risk with good customer outcomes

- Set, approve and monitor adherence to underlying risk parameters and limits across the Group and ensure they are implemented and adhered to consistently within the Board-approved risk appetite
- Aggregate and monitor our exposure across risk classes
- Coordinate risk management activities across the organisation, covering all legal entities and jurisdictions
- Give the Board reasonable assurance that the risks we are exposed to are identified and appropriately managed and controlled
- Resource risk teams suitably and with appropriate expertise and facilitate operating independence
- Run appropriate risk committees, as mandated by the Board
- Maintain compliance in relation to regulatory requirements.

Risk appetite framework

The Group has a number of Board-approved risk appetite statements and policy documents covering our risk appetite and approach to our principal aspects of risk. The risk appetite statements and frameworks for Investec plc set out the Board's mandated risk appetite. The risk appetite statements ensure that limits/targets are applied and monitored across all key operating jurisdictions and legal entities. The risk appetite frameworks act as a guide to determine the acceptable risk profile of the Group.

The risk appetite frameworks are a function of business strategy, budget and capital processes, our stress testing reviews and the regulatory and economic environment in which the Group is operating. The risk appetite frameworks are reviewed (in light of the above aspects) and approved by the Board at least annually or as business needs dictate.

A documented process exists where our risk profile is measured against our risk appetite and this positioning is presented to the Boards. A high-level summary of the Group's overall risk tolerance and positioning has been detailed against the respective principal risks and start on page 14 of the Investec plc 2023 annual report.

Emerging and other risks are factored into the IBP and Investec plc Boards viability assessments. For more information on these assessments refer to page 44 of the Investec plc 2023 annual report and page 86 of the Investec Bank plc 2023 annual report.

RISK MANAGEMENT CONTINUED

Stress testing and portfolio management

The Group's stress testing framework is designed to identify and assess vulnerabilities under stress. The process comprises a bottom-up analysis of the Group's material business activities, incorporating views from risk management teams, business and the executive. Stress scenarios are designed based on findings from the bottom-up process, taking into consideration the broader macro-economic and political risk backdrop.

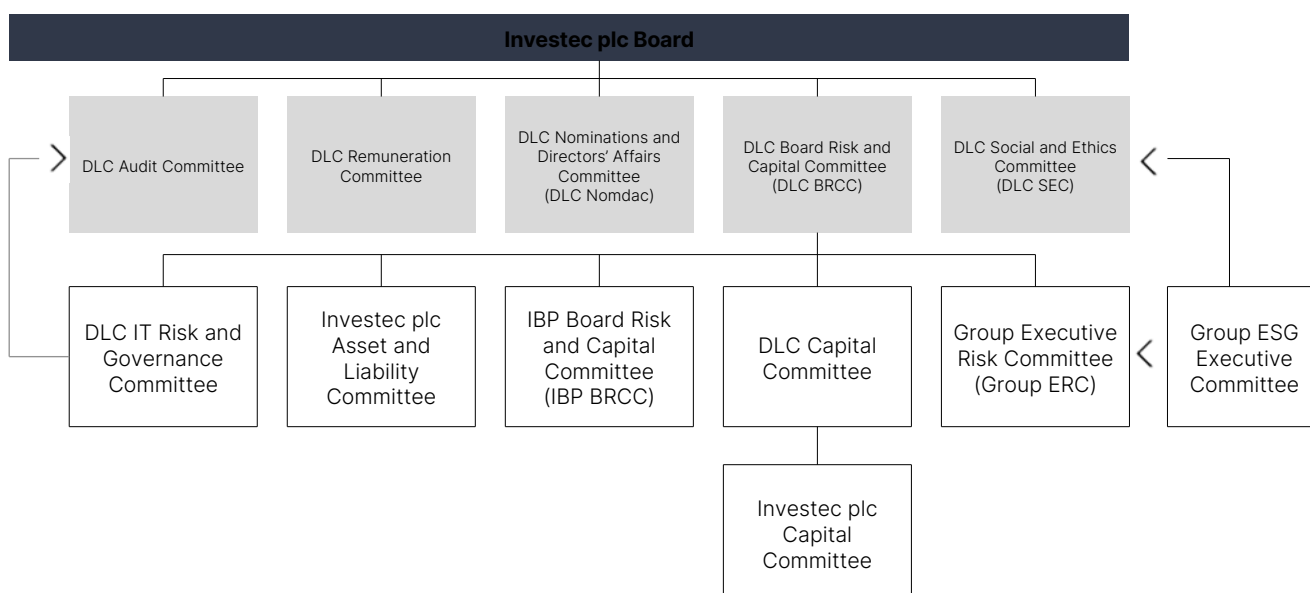

These Investec-specific stress scenarios form an integral part of our capital planning process and IFRS 9 reporting. The stress testing process also informs the risk appetite review process, and the management of risk appetite limits and is a key risk management tool of the Group. This process allows the Group to identify underlying risks and manage them accordingly.

The Group also performs ad hoc stress tests and reverse stress testing. Ad hoc stress tests are conducted in response to any type of material and/or emerging risks, with reviews undertaken of impacted portfolios to assess any migration in quality and highlight any vulnerabilities, identify portfolio concentrations and make appropriate recommendations such as a reduction in risk appetite limits. Reverse stress tests are conducted to stress the Group's business plan to failure and consider a broad variety of extreme and remote events.

Reviews are also undertaken of all material businesses, where the portfolios are analysed to assess any migration in portfolio quality, highlight any vulnerabilities, identify portfolio concentrations and make appropriate recommendations, such as a reduction in risk appetite limits or specific exposures.

Governance

A number of committees and forums identify and manage risk at Group level, as shown in the diagram below. These committees and forums, mandated by the Board, operate together with Group risk management, the IBP Board and sub committees within respective operating jurisdictions. The Board of IBP, our regulated banking subsidiary, and the Board of IW&I, our regulated wealth subsidiary, are responsible for the statutory matters and corporate governance for the respective entities, and ensure compliance with the applicable legislation and governance requirements of the jurisdictions within which they operate. The Boards and Board committees of IBP and IW&I report to the Board and the Board committees of the Group with the interconnection between the respective Board committees supported by the membership or attendance of the chairman of the Group Board committee at the respective subsidiary Board committees.

Capital adequacy and leverage

CAPITAL ADEQUACY AND LEVERAGE

Capital management

Philosophy and approach

The Group's approach to capital management utilises both regulatory capital as appropriate to the jurisdiction in which it operates and internal capital, which is an internal risk-based assessment of capital requirements. Capital management primarily relates to management of the interaction of both, with the emphasis on regulatory capital for managing portfolio level capital sufficiency and on internal capital for ensuring that returns are appropriate given the level of risk taken at an individual transaction or business unit level.

In line with our risk appetite framework we intend to maintain a sufficient level of capital to satisfy regulatory requirements and our internal target ratios.

The determination of target capital is driven by our risk profile, strategy and risk appetite, taking into account the regulatory and market factors applicable to the Group. At the most fundamental level, we seek to balance our capital consumption between prudent capitalisation in the context of the Group's risk profile and optimisation of shareholder returns. Our internal capital framework is designed to manage and achieve this balance.

The internal capital framework is based on the Group's risk identification, review and assessment processes and is used to provide a risk-based approach to capital allocation, performance and structuring of our balance sheet. The objectives of the internal capital framework are to quantify the minimum capital required to:

- Maintain sufficient capital to satisfy the Board's risk appetite across all risks faced by the Group
- Provide protection to depositors against losses arising from risks inherent in the business
- Provide sufficient capital surplus to ensure that the Group is able to retain its going concern basis under relatively severe operating conditions
- Inform the setting of minimum regulatory capital through the Internal Capital Adequacy Assessment Process (ICAAP) and subsequent SREP review.
- The ICAAP documents the approach to capital management, including the assessment of the regulatory and internal capital position of the Bank (solo-consolidation level) and the Investec plc consolidation Group. The ICAAP is reviewed and approved by IBP, Investec plc and DLC Capital Committees and in parallel by IBP BRCC, DLC BRCC and the IBP and the Investec plc Boards.

The IBP and Investec plc Capital Committees seek to optimise the balance sheet such that capital held is in excess of internal capital requirements. Internal capital performs a critical role in:

- Investment decision-making and pricing that is commensurate with the risk being taken
- Allocating capital according to the optimal expected marginal risk-based return, and tracking performance on this basis
- Determining transactional risk-based returns on capital
- Rewarding performance, taking into account the relative levels of risk adopted by forming a basis for the determination of economic value added at a transactional level, and hence the basis for discretionary variable remuneration
- Comparing risk-based performance across business areas.

The framework has been approved by the IBP and Investec plc Boards and is managed by the IBP and Investec plc Capital Committees, which are responsible for oversight of the

management of capital on a regulatory and an internal capital basis.

In order to achieve these objectives, the internal capital framework describes the following approach to the integration of risk and capital management.

Risk modelling and quantification (internal capital)

Internal capital requirements are quantified by analysis of the potential impact of key risks to a degree consistent with our risk appetite. Internal capital requirements are supported by the Board-approved risk assessment process described above. Quantification of all risks is based on analysis of internal data, management expertise and judgement, and external benchmarking.

The following risks are included within the internal capital framework and quantified for capital allocation purposes:

- Credit and counterparty risk, including:
 - underlying counterparty risk
 - concentration risk
 - securitisation risk
- Market risk
- Equity and Investment risk held in the banking book
- Interest rate risk in the banking book
- Operational risk, which is considered as an umbrella term and covers a range of independent risks including, but not limited to fraud, litigation, business continuity, outsourcing and out of policy trading, data management risk, information security and cyber risk.

The specific risks covered are assessed dynamically through constant review of the underlying business environment.

Capital planning and stress/scenario testing

A capital plan is prepared for IBP and Investec plc and is maintained to facilitate discussion of the impact of business strategy and market conditions on capital adequacy. This plan is designed to assess capital adequacy under a range of economic and internal conditions over the medium term (three years), with the impact on earnings, asset growth, risk appetite and liquidity considered. The plan provides the IBP and Investec plc Boards with an input into strategy and the setting of risk appetite by considering business risks and potential vulnerabilities, capital usage and funding requirements given constraints where these exist.

Capital plans are prepared and presented to the capital committees on a monthly basis. The plans are updated with the actual month-end position and forecast out to the end of the fiscal year, taking into account updated profit and loss and asset growth forecasts.

The goal of capital planning is to provide insight into potential sources of vulnerability of capital adequacy by way of market, economic or internal events. As such, the three-year capital plans are stressed based on conditions most likely to cause IBP and Investec plc duress. The conditions are agreed by the IBP and Investec plc Capital Committee after the key vulnerabilities have been determined through the stress testing workshops. Such plans are used by management to formulate balance sheet strategy and agree management actions, trigger points and influence the determination of our risk appetite. The output of capital planning allows senior management to make decisions to ensure that IBP and the Group continue to hold

CAPITAL ADEQUACY AND LEVERAGE CONTINUED

sufficient capital to meet regulatory and internal capital targets. On certain occasions, especially under stressed scenarios, management may plan to undertake a number of actions. Assessment of the relative merits of undertaking various actions is then considered using an internal view of relative returns across portfolios which are themselves based on internal assessments of risk and capital.

Our capital plans are designed to allow senior management and the Board Committees to review:

- Changes to capital demand caused by implementation of agreed strategic objectives, including the creation or acquisition of new businesses, or as a result of the manifestation of one or more of the risks to which we are potentially susceptible to:
 - The impact on profitability of current and future strategies
 - Required changes to the capital structure
 - The impact of implementing a proposed dividend strategy
 - The impact of future regulatory change
 - The impact of alternate market or operating conditions on any of the above.

At a minimum level, each capital plan assesses the impact on our capital adequacy in an expected case and in downturn scenarios. On the basis of the results of this analysis, the Capital Committees, BRCCs and Boards are presented with the potential variability in capital adequacy and are responsible, in consultation with the Board, for considering the appropriate response.

Reverse stress testing is performed annually as part of the ICAAP process.

Pricing and performance measurement

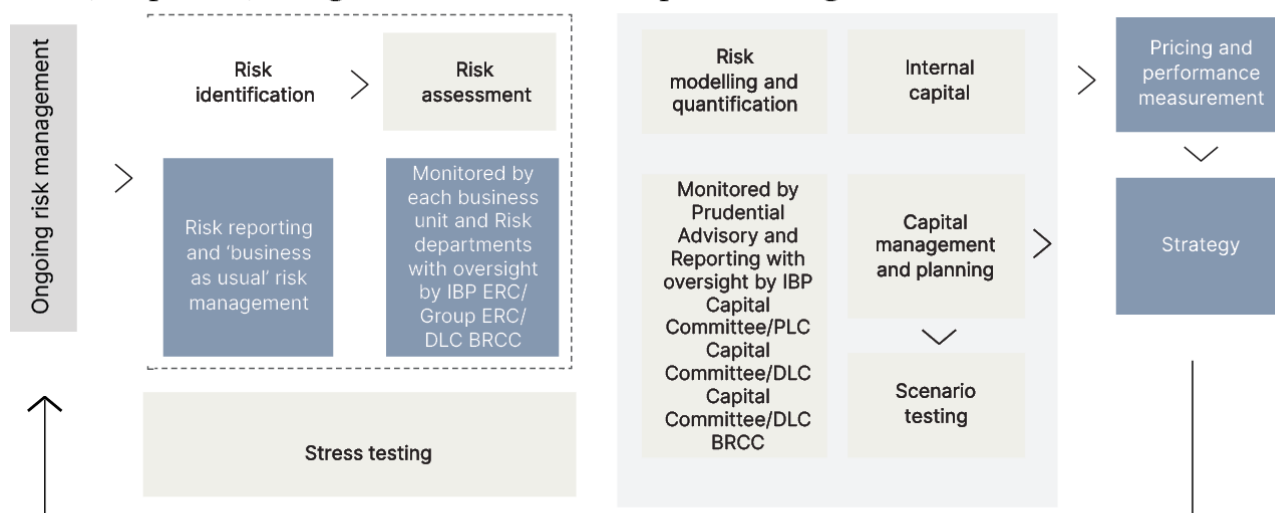

The use of internal capital as an allocation tool means that all transactions are considered in the context of their contribution to return on risk-adjusted capital. This ensures that expected returns are sufficient after taking recognition of the inherent risk generated for a given transaction. This approach allows us to embed risk and capital discipline at the level of deal initiation. Using expectations of risk-based returns as the basis for pricing and deal acceptance ensures that risk management retains a key role in ensuring the portfolio is appropriately managed for that risk.

In addition to pricing, returns on internal capital are monitored and relative performance is assessed on this basis.

Assessment of performance in this way is a fundamental consideration used in setting strategy and risk appetite as well as rewarding performance.

These processes have been embedded across the business with the process designed to ensure that risk and capital management form the basis for key decisions, at the Bank and Group level, as well as at a transactional level. Responsibility for oversight for each of these processes ultimately falls to the IBP BRCC and DLC BRCC.

The (simplified) integration of risk and capital management

At 31 March 2023, the CET1 ratio increased to 11.7% from 11.4% at 31 March 2022. CET1 capital increased by £140 million to £2 billion, mainly as a result of:

- CET1 capital generation of £293 million through profit after taxation
- A decrease of £164 million in the deduction applied to financial sector entities which exceed the 10% threshold

The increases were partially offset by:

- A decrease in other comprehensive income of £71 million, including the fair value uplift on our investment in Ninety One and the reversal of the cash flow hedge reserve which is not recognised in CET1 capital

- Dividends paid to ordinary shareholders and Additional Tier 1 security holders of £197 million, including the Ninety One distribution to shareholders of £91 million
- An increase in foreseeable charges and dividends of £11 million
- An increase in treasury shares of £20 million
- A decrease of £28 million in the IFRS 9 transitional add-back adjustment.

Regulatory capital instruments

Regulatory capital is divided into three main categories, namely CET1, AT1 and T2 capital and comprise the following:

- CET1 capital comprises shareholders' equity and related eligible non-controlling interests after giving effect to deductions for disallowed items (for example, goodwill and intangible assets) and other adjustments
- AT1 capital includes qualifying capital instruments that are capable of being fully and permanently written down or converted into CET1 capital at the point of non-viability of the Group, and related eligible non-controlling interests
- T2 capital comprises qualifying subordinated debt and related eligible non-controlling interests.

Table 7 provides a description of the terms and conditions of all capital instruments, including an indication of which instruments are not CRD IV compliant and are subject to transitional arrangements.

Overview of RWAs

Risk-weighted assets (RWAs) increased by 5% or £787 million to £17.8 billion over the period, predominantly within credit risk RWAs.

Credit risk RWAs, which include equity risk, increased by £751 million. Exchange rate differences caused a net increase in RWAs of £228 million in the period, reflecting mainly the strengthening of the US Dollar and Euro against the British Pound. The remaining increase reflects asset growth in Fund Solutions, Growth and Leveraged Finance and Corporate Secured Project Finance.

Counterparty credit risk RWAs (including credit valuation adjustment risk) decreased by £144 million compared to 31 March 2022, primarily driven by a decrease in repurchase agreements and derivative financial instruments.

Market risk RWAs decreased by £95 million, mainly due to a decrease in the collective investment undertaking position risk.

Operational risk RWAs increased by £238 million, due to an increase in the three-year average operating income used to determine the capital requirement.

Leverage ratio

Overview

In October 2021, the FPC and the PRA confirmed the new UK leverage ratio framework will apply from 1 January 2022 and the existing leverage ratio parts of the UK CRR would be revoked. Investec plc is not subject to the minimum leverage ratio requirement of 3.25%, but is subject to a "supervisory expectation" to manage excessive leverage by ensuring the leverage ratio does not fall below 3.25%. For simplicity the same leverage ratio exposure measure and capital measure applies to all UK banks (including the exemption of central bank reserves and will reflect updated international standards).

The Group's leverage ratio increased to 9.2% from 9.0% at 31 March 2022. The increase is primarily driven by an increase in CET1 capital of £140 million, offset by an increase of £1 billion in the leverage exposure measure. The leverage exposure measure increase is predominantly attributable to foreign

exchange movements as well as asset growth across multiple balance sheet line items, most notably in derivative financial instruments, loans to customers and repurchase agreements.

Governance

As with the governance of capital, the IBP, Investec plc and DLC Capital Committees are responsible for ensuring that the impact of any regulatory changes on the leverage ratio is calculated, analysed and understood at all reporting levels.

The leverage exposure measure is calculated on a monthly and quarterly basis and is presented to these committees on a regular basis. These committees are also responsible for monitoring the risk of excessive leverage.

Capital buffers

Overview

The Group is subject to a CCB and an institution-specific CCyB. As at 31 March 2023 the Group holds a CCB, which must be met with CET1 capital, of 2.5%.

The institution-specific CCyB requirement is calculated based on the relevant exposures held in jurisdictions in which a buffer rate has been set.

On 12 December 2022, the Financial Policy Committee (FPC) increased the UK CCyB rate from 0% to 1%. On 5 July 2022, the FPC announced that it is further increasing the UK CCyB rate from 1% to 2%, with effect from 5 July 2023. From the FPC

meetings held on 28 November 2022, 8 December 2022 and 23 March 2023 the FPC noted that, despite the global and UK economic outlooks having deteriorated and financial conditions having tightened, the UK banking system can absorb the impact of the expected weakening in the economic situation while continuing to meet credit demand from creditworthy households and businesses. The FPC therefore confirmed they will be maintaining the UK CCyB rate at 2% (effective 5 July 2023).

Table 13 which follows shows the geographical distribution of credit exposures relevant to the calculation of the CCyB.

Table 12: Amount of institution specific countercyclical capital buffer (UK CCyB2)

Ref [^]	£' million	31 March 2023	31 March 2022

Credit and counterparty risk

CREDIT AND COUNTERPARTY RISK CONTINUED

Overview

Credit and counterparty risk arises primarily from three types of transactions:

- Lending transactions, through loans and advances to clients and counterparties, creating the risk that an obligor will be unable or unwilling to repay capital and/or interest on loans and advances granted to them. This category includes bank placements, where we have placed funds with other financial institutions
- Financial instrument transactions, producing issuer risk where payments due from the issuer of a financial instrument may not be received
- Trading transactions, giving rise to settlement and replacement risk (collectively counterparty risk):
 - Settlement risk is the risk that the settlement of a transaction does not take place as expected, with one party making required settlements as they fall due but not receiving the performance to which they are entitled
 - Replacement risk is the risk following default by the original counterparty resulting in the contract holder having to enter into a replacement contract with a second counterparty in order to fulfil the transaction.

The relevant credit committees will also consider wrong-way risk at the time of granting credit limits to each counterparty. In the banking book environment, wrong-way risk occurs where the value of collateral to secure a transaction decreases as the probability of default of the borrower or counterparty increases. For counterparty credit risk resulting from transactions in traded products (such as OTC derivatives), wrong-way risk is defined as exposure to a counterparty that is adversely correlated with the credit quality of that counterparty. It arises when default risk and credit exposure increase together.

Credit and counterparty risk may also arise in other ways and it is the role of the risk management functions and the various independent credit committees to identify risks falling outside these definitions.

To manage, measure, monitor and mitigate credit and counterparty risk, independent credit committees exist in the UK. These committees also have oversight of regions where we assume credit risk and operate under Board-approved delegated limits, policies and procedures. There is a high level of executive involvement and oversight in the credit decision-making forums depending on the size and complexity of the deal. It is our policy that all credit committees include voting members who are independent of the originating business unit. All decisions to enter into a transaction are based on unanimous consent.

In addition to the credit committees, the following processes assist in managing, measuring and monitoring credit and counterparty risk:

- Day-to-day arrears management and regular arrears reporting ensure that individual positions and any potential adverse trends are dealt with in a timely manner
- Watchlist Forums in the UK and South Africa and additionally the Arrears, Default and Recovery Forum (ADR Forum) in South Africa review the management of distressed loans, potential problem loans and exposures in arrears that require additional attention and supervision. These committees review ECL impairments and staging at an asset level as well as potential fair value adjustments to loans and advances to customers. They provide recommendations for the appropriate staging and level of ECL impairment where required

- The Forbearance Forum reviews and monitors counterparties who have been granted forbearance measures
- The Impairment Decision Committee reviews recommendations from underlying Watchlist Forums, and considers and approves the appropriate level of ECL impairments and staging
- The Models Forum provides an internal screening and validation process for credit models. We have established independent model validation teams who review the models and provide feedback on the accuracy and operation of the models and note items for further development through the forum.

Governance and risk appetite

The Board has set risk appetite limit frameworks which regulate the maximum exposures we would be comfortable to tolerate in order to diversify and mitigate risk. These limit frameworks, approved at least annually, are monitored on an ongoing basis by IBP BRCC, DLC BRCC and the respective Boards. Should there be any breaches to limits, or where exposures are nearing limits, these exceptions are specifically highlighted for attention, with remedial actions agreed.

Our assessment of our clients and counterparties includes consideration of their character, integrity, core competencies, track record and financial strength. A strong emphasis is placed on the historic and ongoing stability of income and cash flow streams generated by the clients. Our primary assessment method is therefore the ability of the client to meet their payment obligations.

Target clients include high net worth individuals, active wealth creators, high-income professionals, self-employed entrepreneurs, owner managers in small to mid-cap corporates, sophisticated investors, established corporates, small and medium-sized enterprises, financial institutions and sovereigns. Corporates should demonstrate scale and relevance in their market, an experienced management team, able Board members, strong earnings and cash flow.

We are client-centric in our approach and originate loans mainly with the intent of holding these assets to maturity, thereby developing a 'hands-on' and long-standing relationship.

Interbank lending is largely reserved for those banks and institutions in the Group's core geographies of activity, which are systemic and highly rated.

Management and measurement

Fundamental principles employed in the management of credit and counterparty risk include:

- A clear definition of our target market
- A quantitative and qualitative assessment of the creditworthiness of our counterparties
- Analysis of risks, including concentration risk (concentration risk considerations include asset class, industry, counterparty and geographical concentration)
- Decisions being made with reference to risk appetite limits
- Prudential limits
- Regular monitoring and review of existing and potential exposures once facilities have been approved
- A high level of executive involvement in decision-making with non-executive review and oversight
- Portfolio reviews and stress testing.

Within the credit approval process, internal and external ratings are included in the assessment of client quality.

CREDIT AND COUNTERPARTY RISK CONTINUED

A large proportion of the Group's portfolio is not rated by external rating agencies. We place reliance upon internal consideration of counterparties and borrowers and use ratings prepared externally where available to support our decision-making process.

Regular reporting of credit and counterparty risk exposures within our operating units are made to management, the executives and the Board through the DLC BRCC and IBP BRCC. The Board reviews and approves the appetite for credit and counterparty risk, which is documented in risk appetite statements and policy documents. This is implemented and reviewed by the credit risk management teams in each jurisdiction.

Portfolio reviews and stress testing are undertaken on all material businesses, where the exposures are analysed to assess any migration in portfolio quality, highlight any vulnerabilities, identify portfolio concentrations and make appropriate recommendations, such as a reduction in risk appetite limits or specific exposures.

In the Investec plc 2023 annual report exposures are classified to reflect the Group's risk appetite and strategy.

In the Pillar 3 disclosures, exposures are classified according to the regulatory exposure classes. The nature of our activities and appetite for specific types of exposures are described on page 141 of the Investec plc 2023 annual report.

Regulatory approach

Under the SA, ratings assigned by External Credit Assessment Institutions (ECAIs) are used in the calculation of RWAs.

Investec plc complies with the standard association of external ratings with credit quality steps prescribed in the CRR and as published by the PRA.

Investec plc has nominated Fitch Ratings (Fitch), Standard & Poor's (S&P) and Moody's as eligible ECAIs for the purposes of determining external credit ratings. No changes to nominated ECAIs have taken place during the year. The following elections have been made:

- In relation to sovereign and securitisation exposures, Fitch, Moody's and S&P have been selected as eligible ECAIs
- In relation to bank, corporate and debt security exposures, Fitch, Moody's and S&P are recognised as eligible ECAIs.

If two external credit assessments are available for a counterparty, the more conservative assessment will be applied. Where there are three or more credit assessments with different ratings, the credit assessments corresponding to the two lowest credit ratings will be referred to and the higher of those two credit ratings will be used to determine the risk weight applied to the exposure. Where an ECAI rating is unavailable, Investec uses issuer or issue credit assessments under Article 139.

CREDIT AND COUNTERPARTY RISK
CONTINUED

Credit risk adjustments

Definition of default

The Group has aligned the IFRS 9 and regulatory definitions of default, credit impaired and non-performing exposure. Assets that are more than 90 days past due, or considered by management as unlikely to pay their obligations in full without realisation of collateral are considered as exposures in default.

Stage 1

Financial assets that are considered performing and have not had a significant increase in credit risk are reported as Stage 1 assets. Stage 1 financial assets have loss allowances measured at an amount equal to a 12-month ECL.

In line with regulatory and accounting bodies' guidance, exposures that have been granted COVID-19 relief measures such as payment holidays are not automatically considered to have been subject to a significant increase in credit risk and therefore do not alone result in a transfer across stages. Where relief measures are granted, there is no change in expectation of the total amount due. Should the expected recoverability of the loan remain the same, these exposures will remain reported in Stage 1 for the foreseeable future, and will not be required to hold a lifetime ECL.

Stage 2

Financial assets are considered to be in Stage 2 when their credit risk has increased significantly since initial recognition. A loss allowance equivalent to a lifetime ECL is required to be held.

The Group's primary indicator for Stage 2 assets are distressed loans, potential problem loans and exposures in arrears that require additional attention and supervision from watchlist committees and are under management review.

Assets in forbearance are considered to be, at a minimum, Stage 2. Forbearance measures refer to concessions such as modification of the terms and conditions or refinancing that has been granted to a debtor in financial difficulty. These exposures are assessed on a case-by-case basis to determine whether the proposed modifications will be considered as forbearance. Where the Credit Committee considers it likely that the client will be able to return to perform against the original contractual obligations within a reasonable time-frame these assets will be considered performing and in Stage 2. Forbearance is distinguished from commercial renegotiations which take place as part of normal business activity and standard banking practice.

In addition to loans under management review, an asset may also move from Stage 1 to Stage 2 if the model calculated probability of default (PD) has significantly increased since origination. This is tested on both a relative and absolute basis to assess whether a significant deterioration in lifetime risk of default has occurred. There is a common definition across the Bank's exposures regarding what constitutes a significant PD movement. The test involves both an absolute and relative movement threshold. An asset is considered to have been subjected to a significant increase in credit risk if the appropriate PD has doubled relative to the value at origination and on an absolute basis has increased by more than 1%. Any asset with an original rating that is classified as investment grade will be judged to have had a significant movement if the new PD would classify it as sub-investment grade and the equivalent rating has moved by more than three notches.

The Group adopts the view that all financial assets that are more than 30 days past due have experienced a significant increase in credit risk.

Exposures move back to Stage 1 once they no longer meet the criteria above for a significant increase in credit risk and as cure periods (specifically relating to forbore exposures) are met.

Stage 3

Financial assets are included in Stage 3 when there is objective evidence of credit impairment. The Group assesses a loan as Stage 3 when contractual payments of either principal or interest are past due for more than 90 days, the debtor is assessed as unlikely to pay and credit impaired, or the loan is otherwise considered to be in default, for example, due to the appointment of an administrator or the client is in receivership. Forborne loans that are considered non-performing, for example, if a loan is not expected to meet the original contractual obligations in a reasonable time-frame, the loan will be classified as Stage 3. Loans which are 90 days or more past due are considered to be in default.

The Group calculates the credit adjusted effective interest rate on Stage 3 assets, which is calculated based on the amortised cost of the financial asset (i.e. gross carrying amount less ECL allowance) instead of its gross carrying amount and incorporates the impact of the ECLs in estimated future cash flows.

ECL

The assessment of credit risk and the estimation of ECL are required to be unbiased, probability-weighted and should incorporate all available information relevant to the assessment, including information about past events, current conditions and reasonable and supportable forecasts of economic conditions at the reporting date. In addition, the estimation of ECL should take into account the time value of money. As a result, the recognition and measurement of impairment is intended to be forward-looking and therefore, potentially volatile.

Write-offs

The Group has developed specific guidelines on write-off aimed at granting full compliance with IFRS 9 and the document 'Guidance to banks on non-performing loans' issued by the European Central Bank.

A loan or advance is normally written off in full against the related ECL impairment allowance when the proceeds from realising any available security have been received or there is a reasonable amount of certainty that the exposure will not be recovered. This is assessed on a case-by-case basis with considerations to indicators such as whether the exposure has been restructured or the given financial position of the borrower and guarantors. Any recoveries of amounts previously written off decrease the amount of impairment losses.

Credit quality of assets

The tables which follow analyse the amount and quality of performing and non-performing and forbore exposures, including an ageing analysis and the distribution of these exposures by geographical area and industry type. These templates are populated following the guidance provided in the PRA rulebook Reporting (CRR) part for financial reporting (FINREP) templates.

In line with article 9 of part 5 of the Disclosure (CRR) part of the PRA rulebook, a firm classified as a large institution with a gross non-performing loan ratio of less than 5%, is not required to disclose templates UK CR2a, UK CQ2, UK CQ6, UK CQ8, columns b and d of templates UK CQ4 and UK CQ5. In addition we have not disclosed UK CQ7. Investec plc has not obtained any collateral by taking possession and therefore it is a nil return for 31 March 2023.

CONTINUED

Credit risk mitigation

Credit risk mitigation techniques can be defined as all methods by which the Group seeks to decrease the credit risk associated with an exposure. The Investec Group considers credit risk mitigation techniques as part of the credit assessment of a potential client or business proposal and not as a separate consideration of mitigation of risk. Credit risk mitigants can include any collateral item over which the Group has a charge over assets, netting and margining agreements, covenants, or terms and conditions imposed on a borrower with the aim of reducing the credit risk inherent to that transaction.

As the Group has limited appetite for unsecured debt, the credit risk mitigation technique most commonly used is the taking of collateral, with a strong preference for tangible assets. Collateral is assessed with reference to the sustainability of value and the likelihood of realisation.

Acceptable collateral generally exhibits characteristics that allow for it to be easily identified and appropriately valued and assists the Group to recover outstanding exposures.

Where a transaction is supported by a mortgage or charge over property, the primary credit risk is still taken on the borrower. In addition, the relevant credit committee normally requires a suretyship or guarantee in support of a transaction in our private client business.

For property-backed lending we also consider the client's overall balance sheet. The following characteristics of the property are also considered: the type of property; its location; and the ease with which the property could be relet and/or resold. Where the property is secured by lease agreement, the credit committee prefers not to lend for a term beyond the maximum term of the lease. Commercial real estate generally takes the form of good quality property often underpinned by strong third party leases. Residential property is also generally of a high quality and based in desirable locations. Residential and commercial property valuations will continue to form part of our ongoing focus on collateral assessment. It is our policy to obtain a formal valuation of every commercial property offered as collateral for a lending facility before advancing funds. Residential properties are valued by desktop valuation and/or approved valuers, where appropriate.

Other common forms of collateral in the retail asset class are motor vehicles, cash and share portfolios. Primary collateral in private client lending transactions can also include a high net worth individual's share/investment portfolio. This is typically in the form of a diversified pool of equity, fixed income, managed funds and cash. Often these portfolios are managed by Investec Wealth & Investment. Lending against investment portfolios is typically geared at conservative loan-to-value (LTV) ratios, after considering the quality, diversification, risk profile and liquidity of the portfolio.

Our corporate, government and institutional clients provide a range of collateral including cash, corporate assets, debtors (accounts receivable), trading stock, debt securities (bonds), listed and unlisted shares and guarantees.

The majority of credit mitigation techniques linked to trading activity is in the form of netting agreements and daily margining. Primarily, the market standard legal documents that govern this include the International Swaps and Derivatives Association (ISDA) Master Agreements, Global Master Securities Lending Agreement (GMSLA) and Global Master Repurchase Agreement (GMRA). In addition to having ISDA documentation in place with market and trading counterparties in over-the-counter (OTC) derivatives, the credit committee may require a Credit Support Annex (CSA) to ensure that mark-to-market credit exposure is mitigated daily through the calculation and placement/receiving of cash collateral. Where netting agreements have been signed, the enforceability is supported by an external legal opinion within the legal jurisdiction of the agreement.

Set-off is applied between assets, subject to credit risk and related liabilities in the annual financial statements, where:

- A legally enforceable right to set-off exists
- There is the intention to settle the asset and liability on a net basis, or to realise the asset and settle the liability simultaneously.

In addition to the above accounting set-off criteria, banking regulators impose the following additional criteria:

- Debit and credit balances relate to the same obligor/counterparty
- Debit and credit balances are denominated in the same currency and have identical maturities
- Exposures subject to set-off are risk-managed on a net basis
- Market practice considerations.

For this reason, there will be instances where credit and counterparty exposures are displayed on a net basis in these annual financial statements but reported on a gross basis to regulators.

The Group places minimal reliance on credit derivatives in its credit risk mitigation techniques. Periodically the Group will enter into Credit Default Swaps (CDS) in order to hedge a specific asset held or to create a more general or macro hedge against a group of exposures in one industry or geography. In these instances, the Group is deemed to be 'buying protection' against the assets. Depending on the perceived risk, or 'spread', of the underlying exposure, the CDS will fluctuate in value; increasing in value when the asset has become more risky and decreasing when risk has reduced. Occasionally, the Group will enter into trading/investment CDS positions where we buy protection or sell protection without owning the underlying asset. The total amount of net credit derivatives outstanding at 31 March 2023 amounts to -£0.2 million, of which all is used for credit mitigation purposes. Total protection bought amounts to -£0.4 million and total protection sold amounts to £0.2 million relating to credit derivatives used in credit mitigation.

CREDIT AND COUNTERPARTY RISK CONTINUED

The Group implements robust processes to minimise the possibility of legal and/or operational risk through good quality tangible collateral. The legal risk function ensures the enforceability of credit risk mitigants under the laws of the relevant jurisdictions. When assessing the potential concentration risk in its credit portfolio, consideration is given to the types of collateral and credit protection that form part of the portfolio.

Recognition of credit risk mitigation under the standardised approach

For regulatory reporting purposes, credit risk mitigation is used to reduce credit risk associated with an exposure, which may reduce potential losses in the event of a client default or other credit event. CRM that meets certain regulatory criteria may be used to reduce the RWAs held against a given client.

Collateral that meets the regulatory conditions is referred to as 'eligible' collateral. Collateral eligibility rules are specified in the CRR.

Under the SA, CRM can be achieved through either funded or unfunded credit protection.

Where unfunded credit protection is relied upon for mitigation purposes, the exposure to the borrower is substituted with an exposure to the protection provider after applying a 'haircut' to the value of the collateral due to currency and/or maturity mismatches between the original exposure and the collateral provided. Unfunded credit protection includes eligible guarantees and credit derivatives. Where we rely on funded protection in the form of financial collateral, the value of collateral is adjusted using the financial collateral comprehensive method. This method applies supervisory volatility adjustments to the value of the collateral, and includes the currency and maturity haircuts discussed above.

Table 23 shows the CRM techniques used by the Group to reduce capital requirements. If the collateral held for a particular exposure is not eligible under the CRR rules, the full exposure will be considered unsecured in the below table.

Table 23: Disclosure of the use of CRM techniques (UK CR3)

^{^^} The comparatives have been restated to reflect eligible CRM techniques which are recognised in the RWA calculations. Personal guarantees are not eligible collateral in the CRR rules and are excluded from the analysis above.

CREDIT AND COUNTERPARTY RISK
CONTINUED

Counterparty credit risk

CCR is the risk that the counterparty to a transaction could default before the final settlement of the transaction's cash flows. It arises on derivative instruments and securities financing transactions held in both the banking and trading book. A significant component remains the historical equity derivative and financial product exposures that the Group is running down.

Effective 1 January 2022 Investec plc implemented the new SA-CCR calculation methodology. The tables which follow analyse CCR exposures, including credit valuation adjustment risk and exposures to central counterparties.

Wrong-way risk

The relevant credit committees will also consider wrong-way risk at the time of granting credit limits to each counterparty. In the banking book environment, wrong-way risk occurs where the value of collateral to secure a transaction decreases as the probability of default of the borrower or counterparty increases.

For counterparty credit risk resulting from transactions in traded products (such as OTC derivatives), wrong-way risk is defined as exposure to a counterparty that is adversely correlated with the credit quality of that counterparty. It arises when default risk and credit exposure increase together.

CVA risk

Credit Valuation Adjustment (CVA) risk means an adjustment to the mid-market valuation of the portfolio of transactions with a counterparty. This adjustment reflects the current market value of the credit risk of the counterparty to Investec plc but does not reflect the current market value of the credit risk of Investec plc to the counterparty. The Group uses the SA to calculate CVA risk on all OTC derivatives, but as per the CRR exempts transactions to non-financial counterparties and OTC derivatives cleared via central counterparties (CCPs) from CVA risk.

05

Securitisation risk

SECURITISATION RISK

Overview and approach

The Group's definition of securitisation/structured credit activities is wider than the definition applied for regulatory capital purposes. The regulatory capital definition focuses largely on positions we hold in an investor capacity and includes securitisation positions we have retained in transactions in which the Group has achieved significant risk transfer. We believe, however, that the information provided below is meaningful in that it groups all these related activities in order for a reviewer to obtain a full picture of the activities that we have conducted in this space. Some of the information provided below overlaps with the Group's credit and counterparty exposure information.

Risk management and governance

Securitisation transactions provide the bank with a cost-effective, alternative source of financing either through sale to the market or through use of the notes issued as collateral for other funding mechanisms. The Group principally relies on its own internal risk assessment. Overarching these transaction level principles is the Board-approved risk appetite policy, which details the Group's appetite for such exposures, and each exposure is considered relative to the Group's overall risk appetite. We can use explicit credit risk mitigation techniques

where required; however, the Group prefers to address and manage these risks by approving exposures for which the Group has explicit appetite through the consistent application of the risk appetite policy.

Regulatory approach

Since 1 January 2020, the Group applies the new securitisation framework. Capital requirements for securitisation positions are calculated using either the standardised approach (SEC-SA) or the external ratings-based approach (SEC-ERBA).

The tables that follow provide information on our securitisation portfolio in terms of regulatory definitions and requirements. We have not achieved significant risk transfer for any of the securitisations originated by the Group, therefore the underlying exposures in these securitisations are included in the Group's credit risk RWAs and the disclosure that follows focuses on the positions the Group holds in an investor capacity.

Accounting policies

The accounting policies applied to securitisation/structure credit activities are explained on page 70 of the Investec plc 2023 annual report.

Table 29: Securitisation exposures in the non-trading book (UK-SEC1)

^a The references identify the lines prescribed in the PRA template. Only applicable lines with assigned values are reported. All other lines have been suppressed.

In relation to originator securitisations, the table above discloses the retained positions held by the originator in the securitisation, even where the securitisation is not eligible to apply the securitisation framework, due to the absence of significant risk transfer. Investec plc has not achieved significant risk transfer. The securitisation exposures disclosed under the investor role are the investment positions Investec plc has purchased in third party deals.

Market risk

MARKET RISK

Overview

The focus of our trading activities is primarily on supporting our clients. Our strategic intent is that proprietary trading should be limited and that trading should be conducted largely to facilitate client flow. Within our trading activities, we act as principal with clients or the market. Market risk exists where we have taken on principal positions resulting from market making, underwriting and facilitation of client business in the foreign exchange, interest rate, equity, credit and commodity markets.

More information on traded market risk in review and the wind down of the structured products book can be found on page 165 of the Investec plc 2023 annual report.

Traded market risk governance

Traded market risk is governed by policies that cover the management, identification, measurement and monitoring of market risk. We have independent market risk teams to identify, measure, monitor and manage market risk.

The market risk teams have reporting lines that are separate from the trading function, thereby ensuring independent oversight. The Market Risk Forum, mandated by the IBP ERC, manages market risk in accordance with approved principles, policies and risk appetite. Trading desk risk limits are reviewed by the Market Risk Forum and approved by IBP ERC in accordance with the risk appetite defined by the Board. Any significant changes in risk limits are then taken to Group ERC, IBP and DLC BRCCs as well as IBP and DLC boards for review and approval. The appropriateness of limits is continually reassessed, with limits reviewed at least annually, in the event of a significant market event or at the discretion of senior management.

Measurement of traded market risk

A number of quantitative measures are used to monitor and limit exposure to traded market risk. These measures include:

- Value at Risk (VaR) and Expected Shortfall (ES) as portfolio measures of market risk exposure
- Scenario analysis, stress tests and tools based on extreme value theory (EVT) that measure the potential impact on portfolio values of extreme moves in markets
- Sensitivity analysis that measures the impact of individual market risk factor movements on specific instruments or portfolios, including interest rates, foreign exchange rates, equity prices, credit spreads and commodity prices. We use sensitivity measures to monitor and limit exposure across portfolios, products and risk types.

Stress and scenario analyses are used to add insight into the possible outcomes under severe market disruptions. The stress testing methodology assumes that all market factors move adversely at the same time and that no actions are taken during the stress events to mitigate risk. Stress scenarios based on historical experience as well as hypothetical scenarios are considered and are reviewed regularly for relevance in the ever-changing market environment. Stress scenarios are run daily with analysis presented to IBP Review Executive Risk Review Forum (IBP Review ERRF) weekly and IBP BRCC when the committees meet or more often should market conditions require this.

Traded market risk management, monitoring and control

Market risk limits are set according to our risk appetite policy. Limits are set at trading desk level with aggregate risk across all desks also monitored against overall market risk appetite limits. Current market conditions as well as stressed market conditions are taken into account when setting and reviewing these limits.

Market risk teams review the market risks in the trading book with detailed risk reports produced daily for each trading desk and for the aggregate risk of the trading book. The material risks identified are summarised in daily reports that are distributed to, and discussed with senior management when required. The production of risk reports allows for the monitoring of all positions in the trading book against prescribed limits. Documented policies and procedures are in place to ensure there is a formal process for recognition and authorisation for risk excesses incurred.

The risk management software is fully integrated with source trading systems, allowing valuation in risk and trading systems to be fully aligned. All valuation models are subject to independent validation by market risk ensuring models used for valuation and risk are validated independently of the front office.

Regulatory approach

For regulatory purposes, the trading book includes all positions in CRD financial instruments and commodities held by the firm with trading intent, or in order to hedge positions held with trading intent. A CRD financial instrument is defined as a contract that gives rise to both a financial asset of one party and a financial liability or equity of another party.

Investec plc maintains a trading book policy which defines the policies and procedures followed when determining which positions to include in the trading book for the purposes of calculating regulatory capital requirements. Positions which cannot be included in the trading book will be assigned to the banking book and will attract capital requirements in line with this treatment.

All trading book positions will be subject to prudent valuation requirements. The Group applies the Simplified Approach when calculating additional value adjustments to adjust the fair value of trading book assets to their prudent value.

The market risk capital requirement is calculated using the SA.

Interest rate risk in the banking book

INTEREST RATE RISK IN THE BANKING BOOK

Overview

Interest rate risk in the banking book (IRRBB), arises from the impact of adverse movements in interest rates on both net interest earnings and economic value of equity.

Sources of IRRBB include:

- **Repricing risk:** arises from the timing differences in the fixed rate maturity and floating rate repricing of Group assets, liabilities and off-balance sheet derivative positions. This affects the interest rate margin realised between lending income and borrowing costs when applied to our rate sensitive portfolios
- **Yield curve risk:** repricing mismatches also expose the Group to changes in the slope and shape of the yield curve
- **Basis risk:** arises from imperfect correlation in the adjustments of the rates earned and paid on different instruments with otherwise similar repricing characteristics
- **Embedded option risk:** arises from optional elements embedded in items where the Group or its customers can alter the level and timing of their cash flows
- **Endowment risk:** refers to the interest rate risk exposure arising from the net differential between interest rate insensitive assets, interest rate insensitive liabilities and capital

The above sources of interest rate risk affect the interest rate margin realised between lending income and borrowing costs when applied to our rate sensitive asset and liability portfolios, which has a direct effect on future net interest earnings and the economic value of equity.

Management and measurement

IRRBB is an inherent consequence of conducting banking activities, and arises from the provision of non-trading banking products and services. The Group considers the management of banking margin of vital importance, and our non-trading interest rate risk philosophy is reflected in our day-to-day practices.

The aim of IRRBB management is to protect and enhance net interest income and economic value of equity in accordance with the Board-approved risk appetite and to ensure a high degree of stability of the net interest margin over an interest rate cycle. IRRBB is measured and analysed by utilising standard tools of traditional interest rate repricing mismatch and net present value (NPV) sensitivity to changes in interest rate risk factors:

- Income metrics capture the change in accruals expected over a specified time horizon in response to a change in interest rates
- Economic value metrics capture all future cash flows in order to calculate the Group's net worth and therefore can highlight risks beyond the short-term earnings time horizon.

These metrics are used to assess and to communicate to senior management the financial impact of possible future interest rate scenarios, covering:

- Interest rate expectations and perceived risks to the central view
- Standard shocks to levels and shapes of interest rates and yield curves.
- Historically-based yield curve changes.

The repricing gap provides a simple representation of the balance sheet, with the sensitivity of fair values and earnings to changes to interest rates calculated off the repricing gap. This

also allows for the detection of interest rate risk concentration in specific repricing buckets. Net interest income sensitivity measures the change in accruals expected over the specified horizon in response to a shift in the yield curve, while economic value sensitivity and stress testing to macro-economic movement or changes to the yield curve measures the interest risk implicit change in net worth as a result of a change in interest rates on the current values of financial assets and liabilities. Economic value measures have the advantage that all future cash flows are considered and therefore assess the risk beyond the earnings horizon.

Each banking entity has its own Board-approved IRRBB appetite, which is clearly defined in relation to both income risk and economic value risk. The Group has limited appetite for IRRBB.

IRRBB is monitored daily by Asset and Liability Management (ALM) via a daily dashboard which highlights a series of risk appetite and management policy metrics including, as a result of an instantaneous parallel shock of all interest rate curves:

- Net Interest Income (NII) sensitivity over a 12-month period, on an absolute basis in aggregate and per currency and as a percentage of projected annual net interest income
- Economic Value of Equity (EVE) or net present value sensitivity, on an absolute basis in aggregate and per currency and as a percentage of capital. An amortising profile has been assigned to the eligible amount of tangible equity with average duration of 2.5 years which is evenly distributed over the period.

The sensitivity of EVE to six prescribed regulatory interest rate scenarios, representing both parallel and non-parallel shifts to the yield curves in the respective currencies is also calculated on a daily basis.

Operationally, daily management of interest rate risk is centralised within the Treasury of each banking entity and is subject to local independent risk and Asset and Liability Committee (ALCO) review. Treasury mitigates any residual undesirable risk where possible, by changing the duration of the banking book's discretionary liquid asset portfolio, or through derivative transactions. The Treasury mandate allows for a tactical response to market volatility which may arise during changing interest rate cycles, in order to hedge residual exposures. Any resultant interest rate position is managed under the market risk limits. Balance sheet risk management independently monitors a broad range of interest rate risk metrics to changes in interest rate risk factors, detailing the sources of interest rate exposure.

Automatic optionality arising from variable rate products with an embedded minimum lending rate serves as an income protection mechanism for the Group against falling interest rates, while behavioural optionality risk from customers of fixed rate products is mitigated by early repayment charges.

In December 2022 the IBP and DLC Board approved the initiation of a structural hedging programme in the UK, to reduce the sensitivity of earnings to short-term interest rate movements. The Group assigned an evenly amortising profile to an eligible amount of tangible equity with an average duration of 2.5 years evenly distributed over the period. The termed equity is then hedged on a matched basis. Given the short duration of time in which the hedge has existed and the path of interest rates to date, there has been no material earnings impact.

The average repricing maturity for non-maturity deposits (NMDs) as of 31 March 2023 was 52 days. The longest repricing maturity for NMDs was 60 months.

NON-TRADING INTEREST RATE RISK
CONTINUED

Our interest rate sensitivity gap analysis and economic value sensitivity is disclosed in the Investec plc 2023 annual report on page 174.

Investment risk

INVESTMENT RISK

Overview

Investment risk in the banking book comprises 2.0% of total assets at 31 March 2023. We have refocused our principal investment activities on clients where we have and can build a broader relationship through other areas of activity in the Group.

We partner with management and other co-investors by bringing capital raising expertise, working capital management, merger and acquisition and investment experience into client-driven private equity transactions as well as leveraging third party capital into the Group's funds that are relevant to the Group's client base. Investments are selected based on:

- The track record and credibility of management
- Attractiveness of the industry and the positioning therein
- Valuation/pricing fundamentals
- Sustainability analyses
- Exit possibilities and timing thereof
- The ability to build value by implementing an agreed strategy.

Investments in listed shares may arise on an IPO, or sale of an investment to a listed company. There is limited appetite for listed investments.

Additionally, from time to time, the manner in which certain lending transactions are structured results in equity, warrants or profit shares being held, predominantly in unlisted companies. We also source development, investment and trading opportunities to create value within agreed risk parameters.

Following the distribution that took place on 31 May 2022, Investec plc retains a c.10% shareholding in Ninety One (previously known as Investec Asset Management) as an investment (31 March 2022: c.15%).

Management framework and risk appetite

As investment risk arises from a variety of activities conducted by the Group, the monitoring and measurement thereof varies across transactions and/or type of activity. Investment committees exist in the UK which provide oversight of the regions where we assume investment risk.

Risk appetite limits and targets are set to manage our exposure to equity and investment risk. An assessment of exposures against limits and targets is reported to IBP and DLC BRCCs.

As a matter of course, concentration risk is avoided and investments are spread across geographies and industries.

For more information on our valuation and sensitivity assumptions and accounting methodologies please refer to page 161 of the Investec plc 2023 annual report.

Regulatory approach

For regulatory purposes, listed and unlisted equities within the banking book are included in the credit risk capital calculations. Where an equity investment is deemed high risk, it will be included in the exposure category 'items associated with particularly high risk' attracting a risk weight of 150%.

For a breakdown of the investment portfolio and an analysis of income and revaluations recorded, refer to page 161 of Investec plc 2023 annual report.

Operational risk

OPERATIONAL RISK

Overview

Operational risk is an inherent risk in the ordinary course of business activity. The impact could be financial as well as non-financial. Possible non-financial impacts could include customer detriment, reputational or regulatory consequences.

Risk appetite

Operational risk appetite is defined as the level of risk exposure that is acceptable to the Board in order to achieve its business and strategic objectives. The Board is responsible for setting and regularly reviewing the risk appetite. The operational risk appetite policy defines the amount of operational risk exposure, or potential adverse impact of a risk event, that the Group is willing to accept.

Operational risks are managed in accordance with the approved risk appetite. Any breaches of limits are escalated in accordance with the appropriate governance structures.

Operational risk management framework and governance

The Group manages operational risk through an operational risk management framework that is embedded across all levels of the organisation and is supported by a strong risk management culture. The key purpose of the operational risk management framework is to define the policies and practices that provide the foundation for a structured and integrated approach to identify, assess, mitigate/manage, monitor and report on operational risks.

The operational risk governance structures form an integral part of the operational risk management framework. Key components of the governance structures are:

Roles and responsibilities

The Group, in keeping with sound governance practices, has defined roles and responsibilities for the management of operational risk in accordance with the three lines of defence model, i.e. business line management, an independent operational risk function and an independent internal audit function.

Specialist control functions are responsible for the management of key operational risks. These include, but are not limited to: compliance (including financial crime compliance), cyber, finance, fraud, legal, technology and information security risks.

Committees

Operational risk is managed and monitored through various governance forums and committees that are integrated with the Group's risk management governance structure and report to Board level committees.

The Group's operational risk profile is reported to the governance forums and committees on a regular basis, which contributes to sound risk management and decision-making by the Board and management.

• Operational risk:

Management forums and committees are in place at each entity level. Key responsibilities include the monitoring of operational risk and oversight of the operational risk management framework, including approval of the operational risk management policies.

• Technology and information security risk:

The DLC IT Risk and Governance Committee is responsible for the monitoring of current and emerging technology and information security risks. In addition, this committee considers the strategic alignment of technology within the business.

More information on our operational risk practices and key operational risk themes is set out on pages 174 to 175 of the Investec plc 2023 annual report.

Regulatory approach

For regulatory purposes we apply the SA to calculate operational risk capital requirements. The capital requirements are calculated as a percentage of income by business line (per the regulatory definitions) averaged over the last three years. The operational risk charge is updated on an annual basis.

Table 34: Operational risk own funds requirements and risk weighted exposure amounts (UK OR1)

Asset encumbrance

ASSET ENCUMBRANCE

Overview

An asset is defined as encumbered if it has been pledged as collateral against an existing liability and, as a result, is no longer available to the Group to secure funding, satisfy collateral needs or be sold to reduce the funding requirement.

Risk management monitors and manages total balance sheet encumbrance within a Board-approved risk appetite limit. Asset encumbrance is one of the factors considered in the discussion of new products or new funding structures, and the impact on risk appetite is assessed.

Encumbered assets are identified in accordance with the reporting requirements under Article 443 of the Disclosure (CRR) within the PRA Rulebook, and regular reporting is provided to the PRA. The figures included in the tables which follow are median values of these quarterly returns and therefore will not be reconcilable to balances reported in the Investec plc 2023 annual report.

Encumbered assets

The median volume of the encumbered assets of Investec plc in the year leading up to 31 March 2023 was £2.5 billion. This

encumbrance primarily relates to assets encumbered within the Bank of England (BoE) Single Collateral Pool (SCP) to provide collateral for use in their Sterling Monetary Framework market operations and funding schemes, collateral posted as derivative margin, and assets encumbered as part of reverse repurchase agreements and collateralised notes. In addition, Investec plc utilises securitisation in order to raise external term funding as part of its diversified liability base.

IBP is the primary entity which encumbers assets within Investec plc. The most material intragroup encumbrance is related to assets encumbered within the Asset Finance Group (AFG) – £911 million of equipment leases and auto loans originated by AFG have been used as collateral for a retained securitisation. £706 million of senior notes from this securitisation have been used as collateral in the SCP with the remaining notes retained within the Group.

Unencumbered assets

Of the assets which are not currently encumbered, it would not be possible to encumber around 7% – this includes assets such as goodwill, interests in associate undertakings, deferred tax assets, property, plant and equipment, and client assets.

Liquidity risk

LIQUIDITY RISK

Overview

Liquidity risk refers to the possibility that, despite being solvent, we have insufficient capacity to fund increases in assets, or are unable to meet our payment obligations as they fall due, in normal and stressed conditions. This includes repaying depositors or maturing wholesale debt. This risk arises from mismatches in the timing of cash flows, and is inherent in all banking operations, and can be impacted by a range of institution-specific and market-wide events.

Liquidity risk is further broken down into:

- **Funding liquidity risk:** this relates to the risk that the Group will be unable to meet current and/or future cash flows or collateral requirements in the normal course of business, without adversely affecting its solvency, financial position or its reputation
- **Market liquidity risk:** this relates to the risk that the Group may be unable to trade in specific markets or that it may only be able to do so with difficulty due to market disruptions or a lack of market liquidity.

Our Board-approved Internal Liquidity Adequacy Assessment Process concluded that Investec maintains at all times a prudent funding profile and liquidity resources which are adequate, both in amount and quality, to ensure that there is no significant risk that its obligations cannot be met as they fall due, both under the normal course of business and under a stress. In order to achieve this outcome, Investec has in place a robust strategy, policies and systems that enable it to measure, manage and monitor liquidity risk and funding risk over the short and long term.

Management and measurement

Cohesive liquidity management is vital for protecting our depositors, preserving market confidence, safeguarding our reputation and ensuring sustainable growth with established funding sources. Through active liquidity management, we seek to preserve stable, reliable and cost-effective sources of funding. As such, the Group considers ongoing access to appropriate liquidity for all its operations to be of paramount importance, and our core liquidity philosophy is reflected in day-to-day practices which encompass the following robust and comprehensive set of policies and procedures for assessing, measuring and controlling liquidity risk:

- Our liquidity management processes encompass requirements set out within BCBS guidelines and by the regulatory authorities in each jurisdiction, namely the PRA, EBA, GFSC and FINMA
- The risk appetite is clearly defined by the Board and each geographic entity must have its own Board-approved policies with respect to liquidity risk management
- Funding is diversified with respect to currency, term, product, client type and counterparty to ensure a varied overall funding mix
- The balance sheet risk management team independently monitors and communicates key daily funding metrics and liquidity ratios to assess potential risks to the liquidity position, which further act as early warning indicators of potential market disruptions
- The maintenance of sustainable prudent liquidity resources takes precedence over profitability
- The Group maintains contingency funding plans designed to protect depositors, creditors and shareholders and maintain market confidence during adverse liquidity conditions. The plan covers a diverse and credible menu of financial options

available to the Board in order to address a severe stress scenario (including, but not limited to, monetisation of High Quality Liquid Assets (HQLA), raising deposits, debt issuance and securitisation of assets for purposes of selling or monetising via repurchase agreements).

We measure liquidity risk by quantifying and calculating various liquidity risk metrics and ratios to assess potential risks to the liquidity position. These include:

- An internal 'survival horizon' metric which models the number of days it takes before the Group's cash position is depleted under an internally defined worst-case liquidity stress
- Regulatory metrics for liquidity measurement:
 - LCR
 - NSFR
- Additional internally defined funding and balance sheet ratios
- Any other local regulatory requirements.

This suite of metrics ensures the smooth management of the day-to-day liquidity position within conservative parameters and further validates that we are able to generate sufficient liquidity to withstand a range of liquidity stresses or market disruptions.

The liquidity risk framework and governance, including all liquidity metrics and the parameters used in stress scenarios, are Board-approved and reviewed at least annually, taking into account changes in the business environments and input from business units. The objective of stress testing is to analyse the possible impact of a severe but plausible combined market-wide and idiosyncratic stress on our balance sheet, so as to maintain sufficient liquidity and to continue to operate for a minimum period as required by the Board-approved risk appetite.

We further carry out reverse stress tests to identify business model vulnerabilities which test 'tail risks' that can be missed in normal stress tests. The Group has calculated the severity of stress required to breach the liquidity requirements. This scenario is considered highly unlikely given the Group's strong liquidity position, as it requires an extreme withdrawal of deposits combined with the inability to take any management actions to breach liquidity minima that threatens the Group's liquidity position.

The Group operates an industry-recognised third party risk modelling system in addition to custom-built management information systems designed to measure and monitor liquidity risk on both a current and forward-looking basis. A rigorous systems and controls infrastructure for supporting the receipt of timely and accurate liquidity risk data continues to be a key focus of IBP and Investec plc senior management.

Under delegated authority of the respective boards, the Group has established ALCOs within each banking entity in which it operates, using regional expertise and local market access as appropriate. The ALCOs are mandated to ensure independent supervision of liquidity risk within the risk appetite.

Each banking entity has its own Board-approved liquidity policies and its own senior risk committee which is responsible for the measurement and management of the liquidity risk arising within that entity. Senior risk management individuals from each subsidiary are required attendees at the Investec Bank plc and Investec plc ALCOs, ensuring a holistic approach to liquidity risk management.

ALCOs meet on at least a monthly basis to review the exposures that lie within the balance sheet together with market conditions, and decide on strategies to mitigate any undesirable liquidity risk. The Treasury function within each

LIQUIDITY RISK CONTINUED

banking entity is mandated to holistically manage the liquidity mismatch arising from our asset and liability portfolios on a day-to-day basis. The Treasury function within each banking entity is required to exercise tight control of liquidity, funding concentration and encumbrance within the Board-approved risk appetite limits. The ALM team provides independent oversight of the Group's liquidity and reports to the IBP Chief Risk Officer.

Liquidity buffer

The liquidity buffer represents the amount of the Group's liquidity resources which meet the regulatory requirements, after the application of any prescribed haircuts. The majority of the liquidity buffer is held in the form of cash at the BoE. The remainder of the buffer is held in the form of unencumbered high-quality liquid assets (typically in the form of government or rated securities eligible for repurchase with the central bank) or in the form of other near cash items. Investec's liquidity buffer is always well in excess of the regulatory requirements, and its levels and composition are managed within Board-approved limits. Additionally, the Group remains a net liquidity provider to the interbank market, placing significantly more funds with other banks than our short-term interbank borrowings. We do not rely on short-term interbank deposits to fund term lending.

Treasury periodically monetises a representative proportion of the liquid assets through repo or outright sale in order to test its access to the market and the effectiveness of the monetisation process.

Liquidity coverage ratio

The LCR is designed to ensure that banks have sufficient high-quality liquid assets to meet their liquidity needs throughout a 30 calendar day severe stress. The LCR requires banks to hold a stock of HQLA at least as large as expected total net cash outflows over the stress period. The total net cash outflows represent the total expected cash outflows and inflows for the subsequent 30 days, after the prescribed LCR weightings have been applied. The LCR is calculated using the PRA Rulebook (CRR) and our own interpretations where the regulation calls for it.

Risks not captured in the LCR (e.g. intraday risk and derivative initial margin risk) are quantified and would not materially impact the LCR.

The 12-month moving averages of month-end reported LCR observations did not change materially. The business model of the Group is based on borrowing from and lending to a diverse client base including retail and non-retail customers. Funding continues to be dynamically raised through a mix of customer liabilities diversified by customer type, currency, channel and tenor, avoiding reliance on any particular channel and ensuring continued access to a wide range of depositors. Those diversified funding channels have proven to be capable of raising funding throughout the year.

The main drivers of the LCR results are (i) the weighted outflows (over the 30-days LCR window) arising from these deposits and credit facilities and (ii) the size of the liquidity buffer, which is a function of the overall levels of funding and lending (within and outside of the 30-days LCR window).

Investec conducts business in three significant currencies: GBP, EUR and USD, with the main currency being GBP. We aim to match fund assets and liabilities by currency. Investec's liquidity risk management framework requires all operating entities to monitor the LCR for material currencies. The denomination of HQLA securities is tailored to cater for short-term liquidity needs by currency under business-as-usual and stressed circumstances. The active management of currency liquidity risk is driven by internal stress testing and the associated currency level risk appetite limits.

Table UK LIQ1 is completed on an Investec plc Group basis. In accordance with the PRA Pillar 3 liquidity instruction guidelines, the table shows values and figures as the simple averages of month end observations over the preceding 12-months.

Net stable funding ratio

The NSFR is the amount of available stable funding (ASF) relative to required stable funding (RSF) over time horizon of one year with a regulatory minimum of 100%. The PRA communicated in policy statement PS22/21 in October 2021, that effective from 1 January 2022, credit institutions are subject to the UK's new disclosure requirements.

OTHER RISKS

Overview

In addition to the risks explained in this Pillar 3 document, there are other material and significant risks which the Board and senior management believe could have an impact on the operations, financial performance, viability and prospect of the Group.

The Board, through its various sub-committees, has performed a robust assessment of these principal risks and regular reporting of these risks is made to the Board. These risks are summarised in more detail on pages 14 to 30 of the Investec plc 2023 annual report.

Appendix A - Investec Bank plc individual disclosure tables

APPENDIX A

Appendix A – Investec Bank plc individual disclosure tables

IBP is authorised by the PRA and is regulated by the FCA and the PRA on a solo-consolidated basis. IBP applies the provisions laid down in Article 9 (solo-consolidation waiver) of the CRR and therefore includes Investec Investments (UK) Limited in the solo-consolidation.

In accordance with Article 13 and the Disclosure (CRR) Part of the PRA rulebook, a sub-set of Pillar disclosures covering own funds, capital requirements, countercyclical capital buffers, credit risk, remuneration, leverage ratio, liquidity requirements and credit risk mitigation techniques have to be published by significant subsidiaries of the Group. The IBP disclosures which follow are published on an individual level (i.e. solo-consolidation level) as at 31 March 2023, with comparative figures provided for 31 March 2022 where relevant.

Appendix B - CRR references

APPENDIX B
CONTINUED

Appendix B – CRR references

CRR Ref	High-level summary	Compliance reference
Scope of disclosure requirements		
431(1)	Publicly disclose Pillar 3 information.	Investec plc publishes Pillar 3 disclosures.
431(2)	Institutions that have been granted specific permissions by the competent authorities or use credit risk mitigation techniques are required to make certain disclosures under articles 452 to 455.	Only Article 453 is applicable. See below.
431(3)	Institutions must have a formal policy to comply with the disclosure requirements and have policies for assessing the appropriateness of their disclosures, including their verification and frequency. Institutions shall also have policies for assessing whether their disclosures convey their risk profile comprehensively to market participants.	Investec plc has a dedicated Pillar 3 policy.
431(4)	All quantitative disclosures shall be accompanied by a qualitative narrative, noting in particular any significant changes compared to previous disclosures	Where required, qualitative narrative has been provided. Note disclosures adopted for the first time will not have accompanying qualitative narrative.
431(5)	Explanation of ratings decisions to SMEs and other corporate loan applications upon request.	The majority of SME business supported by Investec is via its asset finance business which operates a largely intermediary business channel strategy. All credit decisions are provided in writing including the rationale for any transactions where we feel unable to help. For any automated decisions, customers are invited to ask for any declines to be reviewed if they so wish in line with UK Data Protection law. For all other corporate lending, decisions can be provided upon request.
Non-material, proprietary or confidential information		
432(1)	Institutions may omit information that is not regarded as material if certain conditions are respected.	Compliance is governed by the Pillar 3 policy.
432(2)	Institutions may omit information that is proprietary or confidential if certain conditions are respected.	Compliance is governed by the Pillar 3 policy.
432(3)	Where 432(2) applies this must be stated in the disclosures, and more general information must be disclosed.	If a disclosure is omitted, it is identified in Appendix B.
Frequency and scope of disclosure		
433	Annual disclosures must be published on the same date as the date on which institutions publish their financial statements or as soon as possible thereafter.	Compliance with this provision is covered by the Investec's Pillar 3 policy. Refer to the policy section on page 6 for further information.
433a(1)-(3)	Large institutions are required to disclose certain information on an annual, semi-annual and quarterly basis.	As at 31 March 2023, Investec plc is classified as a large institution.
Disclosure by small and non-complex institutions		
433b(1)-(2)	Small and non-complex institutions shall disclose certain information on an annual and semi-annual basis.	Not applicable. Investec plc is classified as a large institution.
Disclosure by other institutions		
433c(1)-(2)	Institutions that are not subject to Article 433a or 433b shall disclose certain information on an annual and semi-annual basis. Non-listed institutions disclose certain information on an annual basis.	Investec plc discloses information in line with the requirements of Article 433a.
Means of disclosure		
434(1)	Institutions shall disclose information in electronic format and in a single medium or location.	All disclosures are contained in this document, with the exception of the Remuneration disclosures which are included in the 2023 Investec DLC remuneration report. The remuneration disclosures for IBP are included in the remuneration report, section 4 of the Investec Bank plc 2023 annual report.
434(2)	Archive of prior disclosures to be made available on firm's website.	Prior year reports are available on the Investec website.

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Uniform disclosure formats		
434a	Provision left blank	Not applicable
Timing and means of Disclosure under Article 441		
434b(1)-(3)	Disclosure of indicators of global systemic importance.	Not applicable
Disclosure of risk management objectives and policies		
435(1)(a)	The strategies and processes to manage risks.	Refer to the risk management section on page 17, credit and counterparty risk on page 33, securitisation risk on page 50, market risk on page 53, Interest rate risk in the banking book on page 56, investment risk on page 59, operational risk on page 61 and liquidity risk on page 66. For all other risks, refer to page 71.
435(1)(b)	Structure and organisation of risk management functions.	
435(1)(c)	Scope and nature of risk reporting and measurement systems.	
435(1)(d)	Policies for hedging and mitigating risk and strategies and processes for monitoring effectiveness.	
435(1)(e)	Declaration approved the management body on the adequacy of risk management arrangements.	Refer to the risk management section on page 17.
435(1)(f)	Concise risk statement approved by the management body succinctly describing the institution's overall risk profile associated with the business strategy.	
435(2)(a)	Number of directorships held by members of the management body.	Refer to Investec Group's 2023 integrated and strategic annual report pages 127 to 131.
435(2)(b)	Recruitment policy for the selection of members of the management body.	Refer to Investec DLC 2023 remuneration report pages 15 to 18.
435(2)(c)	Policy on diversity of members of the management body.	Refer to Investec Group's 2023 integrated and strategic annual report pages 139.
435(2)(d)	Disclosure of whether a dedicated risk committee is in place, and number of times the committee has met.	Refer to Investec Group risk and governance report 2023 page 117.
435(2)(e)	Description of information flow on risk to the management body.	Refer to Investec Group's 2023 integrated and strategic annual report pages 134 to 135.
Disclosure of scope of application		
436(a)	Name of institution	Refer to policy section on page 6.
436(b)	Reconciliation between the consolidated financial statements prepared in accordance with the applicable accounting framework and the consolidated financial statements prepared in accordance with the requirements on regulatory consolidation.	Refer to table 2 Outline of the differences in the scopes of consolidation (entity by entity) (UK LI3) on page 11, table 4 Mapping of financial statement categories with regulatory risk categories (UK LI1) on page 13 and table 5 Main sources of differences between regulatory exposure amounts and carrying values in the financial statements (UK LI2) on page 15. The differences are further explained in the following sections: -Basis of consolidation on page 10; and -Differences between the financial accounting and regulatory exposure amounts on page 15.
436(c)	Breakdown of assets and liabilities of the consolidated financial statements prepared in accordance with the requirements on regulatory consolidation, broken down by type of risk.	
436(d)	A reconciliation identifying the main sources of differences between the carrying value amounts in the financial statements under the regulatory scope of consolidation and the exposure amount used for regulatory purposes.	
436(e)	For exposures from the trading book and the non-trading book that are adjusted in accordance with Article 34 and Article 105, a breakdown of the amounts of the constituent elements of an institution's prudent valuation adjustment, by type of risks, and the total of constituent elements separately for the trading book and non-trading book positions.	
436(f)	Impediment to the prompt transfer of own funds or to the repayment of liabilities within the Group.	There are no current or foreseen material practical or legal impediments to the prompt transfer of capital resources or repayment of liabilities among the parent undertaking and its subsidiary undertakings.

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of scope of application (continued)		
436(g)	Capital shortfalls in any subsidiaries outside the scope of consolidation.	Entities outside the scope of consolidation are appropriately capitalised.
436(h)	Making use of the provisions laid down in Article 7 and 9.	IBP, the main banking subsidiary of the Group, applies the provisions in article 9 of the CRR (solo-consolidation waiver) and reports to the PRA on a solo-consolidation basis, including Investec Investments (UK) Limited.
Disclosure of own funds		
437(a)	Full reconciliation of Common Equity Tier 1 items, Additional Tier 1 items, Tier 2 items and filters and deductions applied pursuant to Articles 32 to 35, 36, 56, 66 and 79 to own funds of the institution and the balance sheet in the audited financial statements of the institution.	Refer to table 3 Reconciliation of the financial accounting balance sheet to the regulatory scope of consolidation (UK CC2) on page 12 and table 6 Composition of regulatory own funds (UK CC1) on page 22.
437(b)	A description of the main features of the Common Equity Tier 1 and Additional Tier 1 instruments and Tier 2 instruments issued by the institution.	Refer to regulatory capital instruments on page 24 and table 7 Main features of regulatory own funds instruments (UK CCA) on page 24.
437(c)	The full terms and conditions of all Common Equity Tier 1, Additional Tier 1 and Tier 2 instruments.	
437(d)	Disclosure of the nature and amounts of the following: each prudential filter applied pursuant to Articles 32 to 35 each deduction made pursuant to Articles 36, 56 and 66 items not deducted in accordance with Articles 47, 48, 56, 66 and 79.	Refer to table 3 Reconciliation of the financial accounting balance sheet to the regulatory scope of consolidation (UK CC2) on page 12 and table 6 Composition of regulatory own funds (UK CC1) on page 22.
437(e)	A description of all restrictions applied to the calculation of own funds in accordance with this Regulation and the instruments, prudential filters and deductions to which those restrictions apply.	
437(f)	Where institutions disclose capital ratios calculated using elements of own funds determined on a basis other than that laid down in this Regulation, a comprehensive explanation of the basis on which those capital ratios are calculated.	
Disclosure of own funds and eligible liabilities		
437a(a)-(d)	Institutions subject to Article 92a or 92b shall disclose information regarding their own funds and eligible liabilities	Not applicable.
Capital requirements		
438(a)	Summary of the institution's approach to assessing the adequacy of its internal capital to support current and future activities.	Refer to capital management on pages 20 and 21.
438(b)	The amount of the additional own funds requirements based on the supervisory review and evaluation process and its composition in terms of Common Equity Tier 1, additional Tier 1 and Tier 2 instruments.	Refer to table 1 Key metrics (UK KM1) on page 8.
438(c)	Upon demand from the relevant competent authority, the result of the institution's internal capital adequacy assessment process.	This is included in the Group's ICAAP and is shared with the regulator upon request.
438(d)	The total risk weighted exposure amount and the corresponding total own funds requirement determined in accordance with Article 92, to be broken down by the different risk categories and, where applicable, an explanation of the effect on the calculation of own funds and risk weighted exposure amounts that results from applying capital floors and not deducting items from own funds.	Refer to table 8 Overview of risk weighted exposure amounts (UK OV1) on page 26.
438(e)	The on- and off-balance-sheet exposures, the risk weighted exposure amounts and associated expected losses for each category of specialised lending referred to in Table 1 of Article 153(5) and the on- and off-balance-sheet exposures and risk weighted exposure amounts for the categories of equity exposures set out in Article 155(2).	Not applicable. Investec plc applies the SA.

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Capital requirements (continued)		
438(f)	The exposure value and the risk weighted exposure amount of own funds instruments held in any insurance undertaking, reinsurance undertaking or insurance holding company that the institutions do not deduct from their own funds in accordance with Article 49 when calculating their capital requirements on an individual, sub-consolidated and consolidated basis.	Investec plc owns 100% of Investec Captive Insurance. The exposure of £4 million is subject to significant investment thresholds, with the whole exposure subject to a risk weight of 250%.
438(g)	The supplementary own funds requirement and the capital adequacy ratio of the financial conglomerate.	Not applicable. Investec plc is not a financial conglomerate.
438(h)	The variations in the risk weighted exposure amounts of the current disclosure period compared to the immediately preceding disclosure period that result from the use of internal models.	Not applicable.
Disclosure of exposures to counterparty credit risk		
439(a)	A description of the methodology used to assign internal capital and credit limits for counterparty credit exposures, including the methods to assign those limits to exposures to central counterparties.	Refer to capital management on page 20.
439(b)	A description of policies related to guarantees and other credit risk mitigants, such as the policies for securing collateral and establishing credit reserves.	Refer to credit risk mitigation on page 45.
439(c)	A description of policies with respect to General Wrong-Way risk and Specific Wrong-Way risk as defined in Article 291.	Refer to wrong-way risk on page 47.
439(d)	The amount of collateral the institution would have to provide if its credit rating were downgraded.	The Group does not have any funding deals containing credit rating downgrade triggers.
439(e)	For derivative transactions, the amount of segregated and unsegregated collateral received and posted per type of collateral; and for securities financing transactions, the total amount of collateral received and posted per type of collateral; subject to thresholds.	Not applicable.
439(f)	For derivative transactions, the exposure values before and after the effect of the credit risk mitigation, whichever method is applicable, and the associated risk exposure amounts broken down by applicable method.	Refer to table 24 Analysis of counterparty credit risk by approach (UK CCR1) on page 47.
439(g)	For securities financing transactions, the exposure values before and after the effect of the credit risk mitigation, whichever method is used, and the associated risk exposure amounts broken down by applicable method.	
439(h)	The exposure values after credit risk mitigation effects and the associated risk exposures for credit valuation adjustment capital charge, separately for each method.	Refer to table 25 Transactions subject to own funds requirement for CVA risk (UK CCR2) on page 47.
439(i)	The exposure value to central counterparties and the associated risk exposures, separately for qualifying and non-qualifying central counterparties, and broken down by types of exposures.	Refer to table 26 Analysis of exposures to CCPs (UK CCR8) on page 48.
439(j)	The notional amounts and fair value of credit derivative transactions; credit derivative transactions shall be broken down by product type; within each product type, credit derivative transactions shall be broken down further by credit protection bought and credit protection sold.	Refer to table 28 Credit derivatives exposures (UK CCR6) on page 48.
439(k)	The estimate of alpha where the institution has received the permission of the competent authorities to use its own estimate of alpha in accordance with Article 284(9).	Not applicable.
439(l)	Separately, the disclosures included in point (e) of Article 444 and point (g) of Article 452.	Refer to table 27 Standardised approach - CCR exposures by regulatory exposure class and risk weights (UK CCR3) on page 48.
439(m)	For institutions using the methods set out in Sections 4 to 5 of Chapter 6 of Title II Part Three, the size of their on- and off-balance-sheet derivative business as calculated in accordance with Article 273a(1) or (2), as applicable.	Not applicable, Investec applies the SA-CCR methodology.

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of countercyclical capital buffers		
440(a)	The geographical distribution of the exposure amounts and risk weighted exposure amounts of its credit exposures used as a basis for the calculation of their countercyclical capital buffer.	Refer to table 13 Geographical distribution of credit exposures for the calculation of the countercyclical buffer (UK CCyB1) on page 30.
440(b)	The amount of their institution-specific countercyclical capital buffer.	Refer to table 12 Amount of institution specific countercyclical capital buffer (UK CCyB2) on page 29.
Disclosure of indicators of global systemic importance		
441	G-SIIs shall disclose, on an annual basis, the values of the indicators used for determining their score.	Not applicable.
Disclosure of exposures to credit risk and dilution risk		
442(a)	The scope and definitions use for accounting purposes of 'past due' and 'impaired' and the differences, if any, between the definitions of 'past due' and 'default' for accounting and regulatory purposes.	Refer to credit risk adjustments on page 37.
442(b)	A description of the approaches and methods adopted for determining specific and general credit risk adjustments.	Investec plc treats IFRS 9 ECLs as specific credit risk adjustments. We do not recognise any general credit risk adjustments. ECLs are allocated to the underlying exposure in the RWA calculations. For information on IFRS 9 staging refer to credit risk adjustments on page 37.
442(c)	Information on the amount and quality of performing, non-performing and forbore exposures for loans, debt securities and off-balance sheet exposures, including their related accumulated impairment, provisions and negative fair value changes due to credit risk and amounts of collateral and financial guarantees received.	Refer to table 16 Performing and non-performing exposures and related provisions (UK CR1) on page 38, table 19 Credit quality of forbore exposures (UK CQ1) on page 40, table 21 Quality of non-performing exposures by geography (UK CQ4) on page 43 and table 22 Credit quality of loans and advances to non-financial corporations by industry (UK CQ5) on page 44.
442(d)	An ageing analysis of accounting past due exposures.	Refer to table 20 Credit quality of performing and non-performing exposures by past due days (UK CQ3) on page 41.
442(e)	The gross carrying amounts of both defaulted and non-defaulted exposures, the accumulated specific and general credit risk adjustments, the accumulated write-offs taken against those exposures and the net carrying amounts and their distribution by geographical area and industry type and for loans, debt securities and off-balance-sheet exposures.	Refer to table 16 Performing and non-performing exposures and related provisions (UK CR1) on page 38, table 18 Changes in the stock of non-performing loans and advances (UK CR2) on page 40, table 19 Credit quality of forbore exposures (UK CQ1) on page 40, table 21 Quality of non-performing exposures by geography (UK CQ4) on page 43 and table 22 Credit quality of loans and advances to non-financial corporations by industry (UK CQ5) on page 44.
442(f)	Any changes in the gross amount of defaulted on- and off-balance-sheet exposures, including, as a minimum, information on the opening and closing balances of those exposures, the gross amount of any of those exposures reverted to non-defaulted status or subject to a write-off.	
442(g)	The breakdown of loans and debt securities by residual maturity.	Refer to table 17 Maturity of exposures (UK CR1-A) on page 40.
Disclosure of encumbered and unencumbered assets		
443	Institutions shall disclose information concerning their encumbered and unencumbered assets. For those purposes, institutions shall use the carrying amount per exposure class broken down by asset quality and the total amount of the carrying amount that is encumbered and unencumbered. Disclosure of information on encumbered and unencumbered assets shall not reveal emergency liquidity assistance provided by central banks.	Refer table 35 Encumbered and unencumbered assets (UK AE1) on page 63, table 36 Collateral received (UK AE2) on page 64 and table 37 Sources of encumbrance (UK AE3) on page 64.
Disclosure of the use of the Standardised Approach		
444(a)	The names of the nominated ECAs and export credit agencies and the reasons for any changes in those nominations over the disclosure period.	Refer to regulatory approach on page 34.
444(b)	The exposure classes for which each ECAI or export credit agency is used.	

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of the use of the Standardised Approach (continued)		
444(c)	A description of the process used to transfer the issuer and issue credit ratings onto items not included in the trading book.	Refer to regulatory approach on page 34.
444(d)	The association of the external rating of each nominated ECAI or export credit agency with the risk weights that correspond to the credit quality steps as set out in Chapter 2 of Title II of Part Three taking into account that it is not necessary to disclose that information where the institutions comply with the standard association published by the competent authority.	Investec plc complies with the standard association published by the PRA.
Disclosure of the use of the Standardised Approach (continued)		
444(e)	The exposure values and the exposure values after credit risk mitigation associated with each credit quality step by exposure class, as well as those deducted from own funds.	Refer to table 14 Standardised approach – credit risk exposure and credit risk mitigation effects (UK CR4) on page 35, table 15 Standardised approach (UK CR5) on page 36 and table 6 Composition of regulatory own funds (UK CC1) on page 22.
Disclosure of exposure to market risk		
445	Institutions calculating their own funds requirements in accordance with points (b) and (c) of Article 92(3) shall disclose those requirements separately for each risk referred to in those provisions. In addition, own funds requirements for the specific interest rate risk of securitisation positions shall be disclosed separately.	Refer to table 32 Capital requirements for market risk (UK MR1) on page 54.
Disclosure of operational risk management		
446(a)	The approaches for the assessment of own funds requirements for operational risk that the institution qualifies for.	Refer to operational risk and table 34 Operational risk own funds requirements and risk weighted exposure amounts (UK OR1) on page 61.
446(b)	Where the institution makes use of it, a description of the methodology set out in Article 312(2), which shall include a discussion of relevant internal and external factors being considered in the institution's advanced measurement approach.	Not applicable.
446(c)	In the case of partial use, the scope and coverage of the different methodologies used.	Not applicable, Investec plc only applies the SA.
Disclosure of key metrics		
447(a)	The composition of own funds and own funds requirements as calculated in accordance with Article 92.	Refer to table 1 Key metrics (UK KM1) on page 8. Investec plc is not a LREQ firm, therefore the disclosure requirement under article 447(e)((ii) is not applicable.
447(b)	The total risk exposure amount as calculated in accordance with Article 92(3).	
447(c)	Where applicable, the amount and composition of additional own funds which the institutions are required to hold in accordance with regulation 34(1) of the Capital Requirements Regulations.	
447(d)	The combined buffer requirement which the institutions are required to hold in accordance with regulation 35 of the Capital Requirements (Capital Buffers and Macro-prudential Measures) Regulations 2014.	
447(e)	Disclose the following information in relation to leverage ratio: (i) for all institutions, their leverage ratio and total exposure measure; (ii) for LREQ firms, the information in Article 451(1)(b) and (g) and Article 451(2)(b) to (d).	
447(f)	The following information in relation to their liquidity coverage ratio: (i) the average or averages of the liquidity coverage ratio based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period; (ii) the average or averages of the total liquid assets, after applying the relevant haircuts based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period; (iii) the averages of the liquidity outflows, inflows and net liquidity outflows based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period.	

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of key metrics (continued)		
447(g)	The following information in relation to the net stable funding requirement: (i) the average or averages of the net stable funding ratio (ii) the average or averages of the available stable funding (iii) the average or averages of the required stable funding.	Refer to table 1 Key metrics (UK KM1) on page 8.
447(h)	The own funds and eligible liabilities ratios and components, numerator and denominator, as calculated in accordance with Articles 92a and 92b and broken down at the level of each resolution group, where applicable.	Investec plc is not subject to Articles 92a and 92b. Therefore the requirement is not applicable.
Disclosure of exposures to interest rate risk on positions not held in the trading book		
448(1)(a)	Institutions shall disclose the following quantitative and qualitative information on the risks arising from potential changes in interest rates that affect both the economic value of equity and the net interest income of their non-trading book activities referred to in Chapter 9 of the Internal Capital Adequacy Assessment (ICAA) Part of the PRA Rulebook: (a) the changes in the economic value of equity calculated under the following six supervisory shock scenarios referred to in Rule 9.7 of the ICAA Part of the PRA Rulebook for the current and previous disclosure periods: (i) parallel shock up; (ii) parallel shock down; (iii) steepener shock (short rates down and long rates up); (iv) flattener shock (short rates up and long rates down); (v) short rates shock up; (vi) short rates shock down.	Refer to table 33 Quantitative information on IRRBB (UK IRRBB1) on page 57.
448(1)(b)	The changes in the net interest income calculated under the following two supervisory shock scenarios referred to in Rule 9.7 of the ICAA Part of the PRA Rulebook for the current and previous disclosure periods: (i) parallel shock up; (ii) parallel shock down.	
448(1)(c)	A description of key modelling and parametric assumptions used to calculate changes in the economic value of equity and in the net interest income required under points (a) and (b) of this paragraph.	Refer to overview and management and measurement of IRRBB on page 56.
448(1)(d)	An explanation of the significance of the risk measures disclosed under points (a) and (b) of this paragraph and of any significant variations of those risk measures since the previous disclosure reference date.	
448(1)(e)	The description of how institutions define, measure, mitigate and control the interest rate risk of their non-trading book activities for the purposes of the competent authorities' review including: (i) a description of the specific risk measures that the institutions use to evaluate changes in their economic value of equity and in their net interest income; (ii) a description of the key modelling and parametric assumptions used in the institutions' internal measurement systems for the purpose of calculating changes in the economic value of equity and in net interest income, as required under points (a) and (b) of this paragraph, if those assumptions differ from those used for the purposes of Chapter 9 of the ICAA Part of the PRA Rulebook or from those specified in Annex XXXVIII of Chapter 6 of this Disclosure (CRR) Part of the PRA Rulebook, including the rationale for those differences; (iii) a description of the interest rate shock scenarios that institutions use to estimate the interest rate risk; (iv) the recognition of the effect of hedges against those interest rate risks, including internal hedges that meet the requirements laid down in Article 106(3); (v) an outline of how often the evaluation of the interest rate risk occurs.	
448(1)(f)	The description of the overall risk management and mitigation strategies for those risks.	

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of exposures to interest rate risk on positions not held in the trading book (continued)		
448(1)(g)	Average and longest repricing maturity assigned to non-maturing deposits.	Refer to overview and management and measurement of IRRBB on page 56.
448(2)	By way of derogation from paragraph 1 of this Article, the requirements set out in points (c) and (e)(i) to (e)(iv) of paragraph 1 of this Article for descriptions relating to economic value of equity shall not apply to institutions that use the standardised framework referred to in Rule 9.1B of the ICAA Part of the PRA Rulebook.	Not applicable.
Disclosure of exposure to securitisation positions		
449(a)	A description of securitisation and re-securitisation activities, including the risk management and investment objectives in connection with those activities, the role in securitisation and re-securitisation transactions, whether they use the simple, transparent and standardised securitisation (STS), and the extent to which they use securitisation transactions to transfer the credit risk of the securitised exposures to third parties with, where applicable, a separate description of their synthetic securitisation risk transfer policy.	Refer to securitisation risk on page 50.
449(b)	The type of risks they are exposed to in their securitisation and re-securitisation activities by level of seniority of the relevant securitisation positions providing a distinction between STS and non-STs positions and: (i) the risk retained in own-originated transactions; (ii) the risk incurred in relation to transactions originated by third parties.	Refer to securitisation risk on page 50. At 31 March 2023 we have no STS positions.
449(c)	The approaches for calculating the risk weighted exposure amounts that they apply to their securitisation activities, including the types of securitisation positions to which each approach applies and with a distinction between STS and non-STs positions.	Refer to regulatory approach on page 50.
449(d)	A list of SSPEs falling into any of the following categories, with a description of their types of exposures to those SSPEs, including derivative contracts: (i) SSPEs which acquire exposures originated by the institutions; (ii) SSPEs sponsored by the institutions; (iii) SSPEs and other legal entities for which the institutions provide securitisation-related services, such as advisory, asset servicing or management services; (iv) SSPEs included in the institutions' regulatory scope of consolidation.	Requirement (i) and (iv) apply. The following SSPEs acquire originated exposures and are consolidated for regulatory purposes: Cavern Funding 2020 Plc - Securitised auto receivables Temese Funding 2 Plc - Securitised receivables Landmark Mortgage Securities No 2 plc - Securitised residential mortgages
449(e)	A list of any legal entities in relation to which the institutions have disclosed that they have provided support.	Not applicable.
449(f)	A list of legal entities affiliated with the institutions and that invest in securitisations originated by the institutions or in securitisation positions issued by SSPEs sponsored by the institutions.	IBP is the originator and investor in securitisations originated by Investec. In addition Investec Asset Finance plc, Mann Island Finance Limited and CF Corporate Finance Limited have invested in these securitisations.
449(g)	A summary of the accounting policies for securitisation activity, including where relevant a distinction between securitisation and re-securitisation positions.	Refer to accounting policies on page 50.
449(h)	The names of the ECAs used for securitisations and the types of exposure for which each agency is used.	For securitisation exposures, Fitch, Moody's and S&P have been selected as eligible ECAs.
449(i)	Where applicable, a description of the Internal Assessment Approach, including the structure of the internal assessment process and relation between internal assessment and external ratings of the relevant ECA disclosed in accordance with point (h), the control mechanisms and internal assessment process review, the exposure types to which the internal assessment process is applied and the stress factors used for determining credit enhancement levels.	Not applicable.
449(j)	Separately for the trading book and the non-trading book, the carrying amount of securitisation exposures, including information on whether institutions have transferred significant credit risk for which institutions act as originator, sponsor or investor, separately for traditional and synthetic securitisations, and for STS and non-STs transactions and broken down by type of securitisation exposures.	Refer to Securitisation exposures in the non-trading book (UK-SEC1) on page 50.

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of exposure to securitisation positions (continued)		
449(k)	For the trading and the non-trading book activities, the following information: (i) the aggregate amount of securitisation positions where institutions act as originator or sponsor and the associated risk weighted assets and capital requirements by regulatory approaches, including exposures deducted from own funds or risk weighted at 1250%, broken down between traditional and synthetic securitisations and between securitisation and re-securitisation exposures, separately for STS and non-STs positions, and further broken down into a meaningful number of risk-weight or capital requirement bands and by approach used to calculate the capital requirements ; (ii) the aggregate amount of securitisation positions where institutions act as investor and the associated risk weighted assets and capital requirements by regulatory approaches, including exposures deducted from own funds or risk weighted at 1 250%, broken down between traditional and synthetic securitisations, securitisation and re-securitisation positions, and STS and non-STs positions, and further broken down into a meaningful number of risk weight or capital requirement bands and by approach used to calculate the capital requirements.	We have no trading book exposures at 31 March 2023. Refer to Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as investor (UK-SEC4) on page 51.
449(l)	For exposures securitised by the institution, the amount of exposures in default and the amount of the specific credit risk adjustments made by the institution during the current period, both broken down by exposure type.	This disclosure has not been provided. Significant risk transfer has not been achieved for any securitisations originated by the Group. We continue to look through to the underlying assets. Specific credit risk adjustments will be reflected in the credit quality tables.
Disclosure of remuneration policy		
450(1)-(2)	Institutions are required to disclose information regarding their remuneration policy and practices for those categories of staff whose professional activities have a material impact on risk profile of the institutions.	Refer to page 24 of the Investec Group's 2023 remuneration report.
Disclosure of the leverage ratio		
451(1)(a)-(g)	Institutions shall disclose the following information regarding their leverage ratio and their management of the risk of excessive leverage: (a) the leverage ratio; (b) the leverage ratio calculated as if central bank claims were required to be included in the total exposure measure; (c) a breakdown of the total exposure measure, as well as a reconciliation of the total exposure measure with the relevant information disclosed in published financial statements; (d) a description of the processes used to manage the risk of excessive leverage; (e) a description of the factors that had an impact on the leverage ratio during the period to which the disclosed leverage ratio refers; (f) in relation to the quarterly periods up to 31 December 2022, the leverage ratio calculated as if Article 468 of the CRR did not apply for purposes of the capital measure under Article 429(3) of Chapter 3 of the Leverage Ratio (CRR) Part; (g) in relation to the quarterly periods up to 31 December 2024, the leverage ratio calculated as if Article 473a of the CRR did not apply for purposes of the capital measure under Article 429(3) of Chapter 3 of the Leverage Ratio (CRR) Part.	Refer to the leverage ratio section on page 27.
451(2)-(5)	These disclosure requirements apply only to LREQ firms.	Not applicable. Investec plc is not a LREQ firm.
Disclosure of liquidity requirements		
451a(1)	Institutions that are subject to Part Six shall disclose information on their liquidity coverage ratio, net stable funding ratio and liquidity risk management in accordance with this Article	Refer to the liquidity section on pages 66 to 69 and table 38 Quantitative information of LCR (UK LIQ1) on page 68 and table 39 Net Stable Funding Ratio (UK LIQ2) on page 69.

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of liquidity requirements (continued)		
451a(2)	Institutions shall disclose the following information in relation to their liquidity coverage ratio as calculated in accordance with the Chapter 2 of the Liquidity Coverage Ratio (CRR) Part of the PRA Rulebook: (a) the average or averages, as applicable, of their liquidity coverage ratio based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period; (b) the average or averages, as applicable, of their total liquid assets, after applying the relevant haircuts, included in the liquidity buffer pursuant to the Chapter 2 of the Liquidity Coverage Ratio (CRR) Part of the PRA Rulebook, based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period, and a description of the composition of that liquidity buffer; (c) the averages of their liquidity outflows, inflows and net liquidity outflows as calculated in accordance with the Chapter 2 of the Liquidity Coverage Ratio (CRR) Part of the PRA Rulebook, based on end-of-the-month observations over the preceding 12 months for each quarter of the relevant disclosure period and the description of their composition.	Refer to the liquidity section on pages 66 to 68 and table 38 Quantitative information of LCR (UK LIQ1) on page 68.
451a(3)	Institutions shall disclose the following information in relation to their net stable funding ratio: (a) averages of their net stable funding ratio calculated in accordance with Chapter 2 of Title IV of Part Six for each quarter of the relevant disclosure period, based on end-of-the-quarter observations over the preceding four quarters; (b) an overview of the amount of available stable funding calculated for each quarter of the relevant disclosure period, comprising averages based on end-of-the-quarter observations over the preceding four quarters; (c) an overview of the amount of required stable funding calculated for each quarter of the relevant disclosure period, comprising averages based on end-of-the-quarter observations over the preceding four quarters.	Refer to the liquidity section on pages 66 to 69 and table 39 Net Stable Funding Ratio on page 68.
451a(4)	Institutions shall disclose the arrangements, systems, processes and strategies put in place to identify, measure, manage and monitor their liquidity risk in accordance with the Internal Liquidity Adequacy Assessment Part of the PRA Rulebook.	Refer to the liquidity section on pages 66 to 67.
Disclosure of the of the IRB approach to credit risk		
452(a)-(h)	This disclosure is required by institutions calculating risk weighted exposure amounts under the IRB approach to credit risk.	Not applicable. Investec plc has no IRB permissions.
Disclosure of the use of credit risk mitigation techniques		
453(a)	The core features of the policies and processes for on- and off-balance-sheet netting and an indication of the extent to which institutions make use of balance sheet netting.	Refer to credit risk mitigations on page 45 to 46.
453(b)	The core features of the policies and processes for eligible collateral evaluation and management.	
453(c)	A description of the main types of collateral taken by the institution to mitigate credit risk.	
453(d)	For guarantees and credit derivatives used as credit protection, the main types of guarantor and credit derivative counterparty and their creditworthiness used for the purpose of reducing capital requirements, excluding those used as part of synthetic securitisation structures.	
453(e)	Information about market or credit risk concentrations within the credit mitigation taken.	Refer to table 23 Disclosure of the use of CRM techniques (UK CR3) on page 46.
453(f)	For institutions calculating risk weighted exposure amounts under the Standardised Approach or the IRB Approach, the total exposure value not covered by any eligible credit protection and the total exposure value covered by eligible credit protection after applying volatility adjustments; the disclosure set out in this point shall be made separately for loans and debt securities and including a breakdown of defaulted exposures.	

APPENDIX B
CONTINUED

Appendix B – CRR references (CONTINUED)

CRR Ref	High-level summary	Compliance reference
Disclosure of the use of credit risk mitigation techniques (continued)		
453(g)	The corresponding conversion factor and the credit risk mitigation associated with the exposure and the incidence of credit risk mitigation techniques with and without substitution effect.	Refer to table 14 Standardised approach - credit risk exposure and credit risk mitigation effects (UK CR4) on page 35.
453(h)	For institutions calculating risk weighted exposure amounts under the Standardised Approach, the on- and off-balance-sheet exposure value by exposure class before and after the application of conversion factors and any associated credit risk mitigation.	
453(i)	For institutions calculating risk weighted exposure amounts under the Standardised Approach, the risk weighted exposure amount and the ratio between that risk weighted exposure amount and the exposure value after applying the corresponding conversion factor and the credit risk mitigation associated with the exposure; the disclosure set out in this point shall be made separately for each exposure class.	
453(j)	For institutions calculating risk weighted exposure amounts under the IRB Approach, the risk weighted exposure amount before and after recognition of the credit risk mitigation impact of credit derivatives; where institutions have received permission to use own LGDs and conversion factors for the calculation of risk weighted exposure amounts, they shall make the disclosure set out in this point separately for the exposure classes subject to that permission.	Not applicable.
Disclosure of the use of the advanced measurement approach to operational risk		
454	The institutions using the Advanced Measurement Approaches set out in Articles 321 to 324 for the calculation of their own funds requirements for operational risk shall disclose a description of their use of insurance and other risk transfer mechanisms for the purpose of mitigating that risk.	Not applicable.
Use of Internal Market Risk models		
455	Institutions using internal market risk models are subject to specific disclosure requirements.	Not applicable.
