

## INVESTEC | BANK PLC | 2019

(a subsidiary of Investec plc)

Financial information Unaudited condensed consolidated financial information

### Introduction

On 1 April 2018 the bank adopted IFRS 9 'Financial Instruments' which replaced IAS 39 'Financial Instruments: Recognition and Measurement' IFRS 9 requires a move from incurred loss methodology under IAS 39 to an expected credit loss (ECL) methodology. Disclosure related to the initial application and the impact of the transition from IAS 39 to IFRS 9 were included in the transition disclosures published on 15 June 2018. The Investec Bank plc transition disclosures can be accessed via the Investec website at https://www.investec.com/en\_int/welcome-to-investec/about-us/investor-relations/financial-information/subsidiary-results.html

The disclosure of the impact and accounting policies is included on pages 19 to 24. Throughout the rest of the financial disclosures comparative information is provided as at 31 March 2018 and has been presented on an IAS 39 basis and not restated as permitted under IFRS 9. Credit risk disclosures shown on pages 25 to 28 are reported under IFRS 9 with 1 April 2018 comparatives.

Additionally on 1 April 2018, the bank adopted IFRS 15, 'Revenue from Contracts with Customers' which replaced IAS 18 'Revenue'. It applies to all contracts with customers except leases, financial instruments and insurance contracts. The standard establishes a more systematic approach for revenue measurement and recognition by introducing a five-step model governing revenue recognition. There is no impact on measurement and recognition principles previously applied under IAS 18. There is also no impact from the disclosure requirements of IFRS 15.

### Overview of results

| Key financial statistics  | 31 March<br>2019 | 31 March<br>2018 | % change |
|---|------------------|------------------|----------|
| Total operating income before expected credit losses/impairment losses (£'000)  | 1 049 300        | 1 040 147        | 0.9%     |
| Operating costs (£'000)   | 819 169          | 797 049          | 2.8%     |
| Operating profit before goodwill and acquired intangibles, non-operating items, taxation, and after non-controlling interests (£'000) | 207 482          | 136 347          | 52.2%    |
| Earnings attributable to ordinary shareholder (£'000)   | 159 277          | 97 841           | 62.8%    |
| Cost to income ratio^ (%)   | 77.9%            | 76.7%            |          |
| Total capital resources (including subordinated liabilities) (£'000)  | 2 966 927        | 2 788 840        | 6.4%     |
| Total shareholder's equity  | 2 163 228        | 2 209 167        | (2.1%)   |
| Total assets (£'000)  | 22 121 020       | 20 097 225       | 10.1%    |
| Net core loans and advances* (£'000)  | 10 486 678       | 9 663 172        | 8.5%     |
| Customer accounts (deposits) (£'000)  | 13 499 234       | 11 969 625       | 12.8%    |
| Loans and advances to customers as a % of customer deposits   | 77.7%            | 80.7%            |          |
| Cash and near cash balances (£'000)   | 6 792 462        | 5 598 418        | 21.3%    |
| Funds under management (£'mn)   | 39 482           | 37 276           | 5.9%     |
| Total gearing ratio/leverage ratio (i.e. total assets to equity)  | 10.2x            | 9.1x             |          |

| Key asset quality and capital ratios  | 31 March<br>2019 | 1 April<br>2018 |
|---|------------------|-----------------|
| Capital adequacy ratio  | 17.0%            | 16.0%           |
| Tier 1 ratio  | 12.9%            | 12.8%           |
| CET 1 ratio   | 11.2%            | 11.3%           |
| Leverage ratio – current  | 7.9%             | 8.2%            |
| Leverage ratio – 'fully loaded'   | 7.7%             | 8.1%            |
| Stage 3 exposure as a % of gross core loans and advances to customers subject to ECL          | 3.2%             | 6.3%            |
| Stage 3 exposure net of ECL as a % of net core loans and advances to customers subject to ECL | 2.2%             | 4.3%            |
| Credit loss ratio#  | 0.38%            | 1.14%**         |

<sup>\*</sup> Loans and advances to customers net of ECL held against FVOCI loans reported within reserves.

<sup>\*\*</sup> As at 31 March 2018.

<sup>#</sup> Expected credit loss (ECL) impairment charges on gross core loans and advances as a % of average gross core loans and advances subject to ECL.

The group has changed its cost to income ratio definition to exclude operating profits or losses attributable to other non-controlling interests. As such, the cost to income ratio is calculated as: operating costs divided by operating income (net of depreciation on operating leased assets and net of operating profits or losses attributable to other non-controlling interests).

### CONSOLIDATED INCOME STATEMENT

| £'000   | Year to<br>31 March<br>2019 | Year to<br>31 March<br>2018 |
|---|-----------------------------|-----------------------------|
| Interest income   | 727 742                     | 598 494                     |
| Interest expense  | (336 363)                   | (248 876)                   |

On adoption of IFRS 9, there is a move from an incurred loss model to an expected credit loss methodology.

The group has changed its cost to income ratio definition to exclude operating profits or losses attributable to other non-controlling interests. As such, the cost to income ratio is calculated as: operating costs divided by operating income (net of depreciation on operating leased assets and net of operating profits or losses attributable to other non-controlling interests).

Fair value through profit and loss balance sheet positions have been split as trading and non-trading, as defined by regulatory rules for the trading book and banking book requirements respectively. Trading consists of positions held for trading intent or to hedge elements of the trading book. Non-trading consists of positions that are expected to be held to maturity.

Derivative financial instruments have been classified as trading and include derivatives held as hedges

### ADDITIONAL IAS 34 DISCLOSURES

(continued)

### Fair value hierarchy

The table below analyses recurring fair value measurements for financial assets and financial liabilities. These fair value measurements are categorised into different levels in the fair value hierarchy based on the inputs to the valuation technique used. The different levels are identified as follows:

- Level 1 quoted (unadjusted) prices in active markets for identical assets or liabilities.
- Level 2 inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).
- Level 3 inputs for the asset or liability that are not based on observable market data (unobservable inputs).

|   |                                 | Valuation technique applied |           |           |
|---|---------------------------------|-----------------------------|-----------|-----------|
| £'000   | Total instruments at fair value | Level 1                     | Level 2   | Level 3   |
| 31 March 2019   |                                 |                             |           |           |
| Assets  |                                 |                             |           |           |

|   | 1 671 490                       | 453 781                     | 1 087 372 | 130 337   |
| Net assets/(liabilities) at fair value                          | 3 208 218                       | 1 638 591                   | (183 881) | 1 753 508 |

The group transfers between levels within the fair value hierarchy when the observability of inputs change or if the valuation methods change.

### Transfers between level 1 and level 2

During the current year there were no transfers between level 1 and level 2.

### Fair value hierarchy (continued)

The following table is a reconciliation of the opening balances to the closing balances for fair value instruments in level 3 of the fair value hierarchy.

| £'000                          | Investment<br>portfolio | Loans and advances to customers | Other securitised assets | Other balance sheet assets <sup>1</sup> | Total     |
|--------------------------------|-------------------------|---------------------------------|--------------------------|---|-----------|
| Assets                         |                         |                                 |                          |   |           |
| Balance as at 31 March 2018    | 418 088                 | 133 740                         | 132 172                  | 59 881                                  | 743 881   |
| Adoption of IFRS 9             | 8 060                   | 1 167 625                       | _                        | 75 692                                  | 1 251 377 |

<sup>1</sup> Comprises of level 3 other debt securities, derivative financial instruments and securities arising from trading

The group transfers between levels within the fair value hierarchy when the observability of inputs change or if the valuation methods change.

For the year ended 31 March 2019, there were no transfers from level 3 into level 2. There were transfers from level 2 into level 3 of £nil assets and £2.9 million of liabilities.

<sup>2</sup> Comprises of level 3 derivative financial instruments

### ADDITIONAL IAS 34 DISCLOSURES

(continued)

The following table quantifies the gains or (losses) included in the income statement and other comprehensive income recognised on level 3 financial instruments:

| For the year ended 31 March 2019<br>£'000                                     | Total   | Realised | Unrealised |
|---|---------|----------|------------|
| Total gains or (losses) included in the income statement for the year         |         |          |            |
| Net interest income   | 99 951  | 86 118   | 13 833     |
| Investment income   | 27 495  | 1 939    | 25 556     |
| Trading income arising from customer flow                                     | (3 272) | 6 910    | (10 182)   |
|   | 124 174 | 94 967   | 29 207     |
| Total gains or (losses) included in other comprehensive income for the year   |         |          |            |
| Gains on realisation on debt instruments at FVOCI recycled through the income |         |          |            |
| statement   | -       | -        | _          |
| Fair value movements on debt instruments at FVOCI taken directly to other     |         |          |            |
| comprehensive income  | 205     | -        | 205        |
|   | 205     | -        | 205        |

### $Level\ 2\ financial\ assets\ and\ financial\ liabilities$

The following table sets out the group's principal valuation techniques as at 31 March 2019 used in determining the fair value of its financial assets and financial liabilities that are classified within level 2 of the fair value hierarchy.

|  | Valuation basis/techniques   | Main assumptions  |
|--|--|---|
| Assets   |  |   |
| Reverse repurchase agreements and cash collateral on securities borrowed | Discounted cash flow model, Hermite interpolation  | Discount rates  |
| Other debt securities  | Discounted cash flow model   | Discount rates, swap curves and NCD curves, external prices, broker quotes  |
| Derivative financial instruments   | Discounted cash flow model, Hermite interpolation, industry standard derivative pricing models including Black-Scholes | Discount rate, risk free rate, volatilities, forex forward points and spot rates, interest rate swap curves and credit curves |
| Securities arising from trading activities                               | Standard industry derivative pricing model   | Interest rate curves, implied bond spreads, equity volatilities   |
| Investment portfolio   | Discounted cash flow model, net asset  | Discount rate and fund unit price   |
|  | value model  | Net assets  |
|  | Comparable quoted inputs   |   |
| Liabilities  |  |   |
| Derivative financial instruments   | Discounted cash flow model, Hermite interpolation, industry standard derivative pricing models including Black-Scholes | Discount rate, risk free rate, volatilities, forex forward points and spot rates, interest rate swap curves and credit curves |
| Repurchase agreements and cash collateral on securities lent             | Discounted cash flow model, Hermite interpolation  | Discount rates  |
| Debt securities in issue   | Discounted cash flow model   | Discount rates  |

### Sensitivity of fair values to reasonably possible alternative assumptions by level 3 instrument type

The fair value of financial instruments in level 3 are measured using valuation techniques that incorporate assumptions that are not evidenced by prices from observable market data. The following table shows the sensitivity of these fair values to reasonably possible alternative assumptions, determined at a transactional level:

| 31 March 2019  | Balance<br>sheet value<br>£'000 | Significant unobservable input                 | Range of unobservable input used | Favourable changes £'000 | Unfavourable changes £'000 |
|--|---------------------------------|--|----------------------------------|--------------------------|----------------------------|
| Assets   |                                 |  |                                  |                          |                            |
| Other debt securities                                  | 83 170                          | Potential impact on income statement           |                                  | 7 741                    | (7 543)                    |
|  |                                 | Credit spreads                                 | 5.8%                             | 117                      | (114)                      |
|  |                                 | Other <sup>^</sup>                             | ^                                | 7 624                    | (7 429)                    |
| Derivative financial instruments                       | 38 635                          | Potential impact on income statement           |                                  | 22 720                   | (5 882)                    |
|  |                                 | Volatilities                                   | 4.0% - 9.0%                      | 129                      | (129)                      |

<sup>\*</sup> The sensitivity of the fair value of liabilities arising on securitisation of other assets has been considered together with other securitised assets.

Within the Hong Kong portfolio there is a connected exposure across the investment portfolio, loans and advances to customers and derivatives financial instruments lines with a balance sheet value of £69 million. The consideration of reasonable possible alternative assumptions with respect to the fair value of this exposure results in a favourable changes of £95 million and a unfavourable change of £69 million, included within the above table.

Other – The valuation sensitivity has been assessed by adjusting various inputs such as expected cash flows, discount rates, earnings multiples rather than a single input. It is deemed appropriate to reflect the outcome on a portfolio basis for the purposes of this analysis as the sensitivity of the assets cannot be determined through the adjustment of a single input.

<sup>^\</sup>Underlying asset values are calculated by reference to a tangible asset, for example property, aircraft or shares.

### ADDITIONAL IAS 34 DISCLOSURES

(continued)

In determining the value of level 3 financial instruments, the following are the principal inputs that can require judgement:

### Credit spreads

Credit spreads reflect the additional yield that a market participant would demand for taking exposure to the credit risk of an instrument. The credit spread for an instrument forms part of the yield used in a discounted cash flow calculation. In general a significant increase in a credit spread in isolation will result in a movement in fair value that is unfavourable for the holder of a financial instrument. It is an unobservable input into a discounted cash flow valuation.

### Discount rates

Discount rates (including WACC) are used to adjust for the time value of money when using a discounted cash flow calculation method where relevant, the discount rate also accounts for illiquidity, market conditions and uncertainty of future cash flows.

### **Volatilities**

Volatility is a key input in the valuation of derivative products containing optionality. Volatility is a measure of the variability or uncertainty in returns for a given derivative underlying. It represents an estimate of how much a particular underlying instrument, parameter or index will change in value over time.

### Cash flows

Cash flows relate to the future cash flows which can be expected from the instrument and requires judgement. Cash flows are input into a discounted cash flow valuation.

### Price earnings multiple

The price-to-earnings ratio is an equity valuation multiple used in the adjustment of underlying market prices. It is a key driver in the valuation of unlisted investments.

### **EBITDA**

A company's earnings before interest, taxes, depreciation and amortisation. This is the main input into a price earnings multiple valuation method.

### Underlying asset value

In instances where cash flows have links to referenced assets, the underlying asset value is used to determine the fair value. The underlying asset valuation is derived using observable market prices sourced from broker quotes, specialist valuers or other reliable pricing sources.

### Fair value of financial instruments at amortised cost

| At 31 March 2019<br>£'000   | Carrying amount | Fair value |
|---|-----------------|------------|

The group accounting policies related to financial instruments, which have been significantly changed as the result of the implementation of IFRS 9, are applicable with effect from 1 April 2018, and are set out below. The full set of accounting policies is set out in the 2019 annual report.

# Standards adopted during the year ending 31 March 2019

The requirements of IFRS 9 'Financial Instruments' were adopted from 1 April 2018. IFRS 9 includes an accounting policy choice to remain with IAS 39 hedge accounting, which the group has exercised

The adoption of IFRS 9 includes the adoption of 'Prepayment Features with Negative Compensation (Amendments to IFRS 9)' which is effective for annual periods beginning on or after 1 January 2019 with early adoption permitted. This amendment was endorsed by the EU in March 2018 and the group has decided to apply the amendment from 1 April 2018 in order to reflect all of the effects of IFRS 9 at the same time.

The classification and measurement and impairment requirements are applied retrospectively by adjusting the opening balance sheet at the date of initial application, with no requirement to restate comparative periods. The group is not restating comparatives on initial application as permitted by IFRS 9.

### Financial instruments

Financial instruments are initially recognised at their fair value. For financial assets or financial liabilities not held at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue of the financial assets or financial liabilities are included in the initial measurement. All other transaction costs are recorded in the income statement immediately. Regular way purchase and sales transactions in respect of financial assets that require delivery of a financial instrument within the timeframe established by market convention are recorded at trade date.

### Business model assessment

For financial assets, IFRS 9 requires that a business model assessment is carried out which reflects how the group manages the assets in order to generate cash flows. The assessment is at a portfolio level, being the level at which the portfolio is managed. Factors considered by the group in determining the business model for a group of assets include past experience on how the cash flows for these assets were collected, how the assets' performance is evaluated and reported and how risks are assessed and managed.

The standard sets out different types of business model:

- Hold to collect: it is intended to hold the asset to maturity to earn interest, collecting repayments of principal and interest from the customer. These assets are accounted for at amortised cost
- Hold to collect and sell: this model is similar to the hold to
  collect model, except that the entity may elect to sell some or
  all of the assets before maturity to achieve the objectives of the
  business model. These assets are accounted for at FVOCI.

Hold to sell/managed on a fair value basis: the entity
originates or purchases an asset with the intention of disposing
of it in the short or medium term to benefit from capital
appreciation or the portfolio is managed on a fair share basis.
These assets are accounted for at FVPL.

However, the group may make the following irrevocable election/ designation at initial recognition of a financial asset on an asset-byasset basis:

- elect to present subsequent changes in fair value of an equity investment that is neither held for trading nor contingent consideration recognised by an acquirer in a business combination to which IFRS 3 applies, in OCI; and
- a debt instrument that meets the amortised cost or FVOCI criteria as measured at FVPL if doing so eliminates or significantly reduces an accounting mismatch (referred to as the fair value option).

The classification into one of these categories is based on the entity's business model for managing the assets and the contractual cash flow characteristics of the assets.

### Solely payment of principal and interest (SPPI)

Where the business model is to hold assets to collect contractual cash flows or to collect contractual cash flows and sell, the group assesses whether the assets' cash flows represent solely payments of principal and interest (the SPPI test). In making this assessment, the group considers whether the contractual cash flows are consistent with a basic lending arrangement (i.e. interest includes only consideration for the time value of money, credit risk, other basic lending risks and a profit margin that is consistent with a basic lending arrangement). Where the contractual terms introduce exposure to risk or volatility that are inconsistent with a basic lending arrangement, the related asset is classified and measured at FVPL.

Financial assets with embedded derivatives are considered in their entirety when determining whether their cash flows are solely payments of principal and interest.

# Financial assets and liabilities measured at amortised cost

Financial assets that are held to collect the contractual cash flows and that contain contractual terms that give rise to cash flows that are solely payments of principal and interest, such as most loans and advances to banks and customers and some debt securities, are measured at amortised cost. In addition, most financial liabilities are measured at amortised cost.

The group may commit to provide a loan which has not yet been drawn. When the loan that arises from the lending commitment is expected to meet the criteria to be measured at amortised cost the undrawn commitment is also considered to be and is included in the impairment calculation below.

The carrying value of these financial assets at initial recognition includes any directly attributable transactions costs. If the initial fair value is lower than the cash amount advanced, such as in the case of some leveraged finance and syndicated lending activities, the difference is deferred and recognised over the life of the loan through the recognition of interest income, unless the loan is credit impaired.

(continued)

# Financial assets and liabilities measured at fair value through other comprehensive income (FVOCI)

Financial assets held for a business model that is achieved by both collecting contractual cash flows and selling and that contain contractual terms that give rise on specified dates to cash flows that are solely payments of principal and interest are measured at FVOCI. They are recognised on the trade date when the group enters into contractual arrangements to purchase and are normally derecognised when they are either sold or redeemed.

They are subsequently remeasured at fair value and changes therein (except for those relating to impairment, interest income and foreign currency exchange gains and losses) are recognised in other comprehensive income until the assets are sold. Upon disposal, the cumulative gains or losses in other comprehensive income are recognised in the income statement as 'Gains less losses arising from derecognition of debt instruments measured at fair value through other comprehensive income'.

Financial assets measured at FVOCI are included in the impairment calculations set out below and impairment is recognised in profit or loss.

# Impairment of financial assets held at amortised cost or FVOCI

At each balance sheet date each financial asset or portfolio of advances categorised at amortised cost or at fair value through other comprehensive income, issued financial guarantee and loan commitment is measured for ECL impairment. Loss allowances are forward-looking, based on 12-month expected credit losses where there has not been a significant increase in credit risk rating, otherwise allowances are based on lifetime expected losses.

Expected credit losses are a probability-weighted estimate of credit losses. The probability is determined by the risk of default which is applied to the cash flow estimates. On a significant increase in credit risk, credit losses are rebased from 12-month to lifetime expectations. A change in credit risk is typically but not necessarily associated with a change in the expected cash flows.

The costs of loss allowances on assets held at amortised cost are presented as impairments in the income statement. Allowances in respect of financial guarantees and loan commitments are presented as other liabilities and charges recorded within income statement impairments. Financial assets held at amortised cost are presented net of allowances except where the asset has been wholly or partially written off.

Financial assets where 12-month ECL is recognised are considered to be 'Stage 1, financial assets which are considered to have experienced a significant increase in credit risk are in 'Stage 2', and financial assets for which there is objective evidence of impairment so are considered to be in default or otherwise credit-impaired are in 'Stage 3'.

# Financial assets and liabilities held at fair value through profit or loss

Financial instruments held at fair value through profit or loss include all instruments classified as held-for-trading those instruments designated as held at fair value through profit or loss and those financial assets which do not meet the criteria for amortised cost or EVOCI

Financial instruments classified as FVPL are initially recorded at fair value on the balance sheet with changes in fair value subsequently recognised in the income statement. Financial instruments are classified as trading when they are held with the intention of short-term disposal, held with the intention of generating short-term profit, or are derivatives which are not designated as part of effective hedges. Financial instruments designated as held at fair value through profit or loss are designated as such on initial recognition of the instrument and remain in this classification until derecognition.

Own credit risk on financial liabilities designated at fair value is recognised in other comprehensive income.

Financial assets and liabilities are designated as held at fair value through profit or loss only if:

- they eliminate or significantly reduce a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases; or
- a group of financial liabilities or both financial assets and financial liabilities is managed and its performance is evaluated on a fair value basis in accordance with a documented risk management or investment strategy and information about the group is provided internally on that basis to the group's key management personnel; or
- a financial liability contract contains one or more embedded derivatives (which significantly modifies the cash flows that would be required by the contract and is not clearly prohibited from separation from the host contract) and the group has designated the entire hybrid contract as a financial instrument at fair value through profit or loss.

# Securitisation/credit investment and trading activities exposures

The group makes use of securitisation vehicles as a source of finance, as a means of risk transfer and to leverage returns through the retention of equity tranches in low default rate portfolios. The group predominantly focuses on the securitisation of lease receivables. The group also trades in structured credit investments.

The structured entities are consolidated under IFRS 10 Consolidated Financial Statements when the group has exposure to or rights to, variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

Loans and advances that are originated are transferred to structured entities, and the structured entities issue debt securities to external investors to fund the purchase of the securitised assets. When the group consolidates the structured entity, the group recognises the assets and liabilities on a gross basis. When the group does not consolidate the structured entity, the securitised assets are derecognised and only any position still held by the group in the structured entity is reflected.

(continued)

### Day-one profit or loss

When the transaction price differs from the fair value of other observable current market transactions in the same instrument or based on the valuation technique whose variables include only data from observable markets, the difference between the transaction price and fair value is recognised immediately in the income statement.

In cases where fair value is determined using data which is not observable, the difference between the transaction price and model value is only recognised in the income statement when the inputs become observable, or when the instrument is derecognised or over the life of the transaction.

### Derecognition of financial assets and liabilities

A financial asset, or a portion thereof, is derecognised when the group's rights to cash flows have expired or when the group has transferred its rights to cash flows relating to the financial assets and either (a) the group has transferred substantially all the risks and rewards associated with the financial assets or (b) the group has neither transferred nor retained substantially all the risks and rewards associated with the financial assets but has transferred control of the assets.

The treatment of a renegotiation or modification of the contractual cash flows of a financial asset depends upon whether the modification is done for commercial reasons, in which case if they are significant the old asset is derecognised and a new asset recognised, or because of financial difficulties of the borrower.

A financial liability is derecognised when it is extinguished, that is when the obligation is discharged, cancelled or expired. When an existing financial liability is replaced or modified with substantially different terms, such a replacement or modification is treated as a derecognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the income statement.

Financial assets are only reclassified where there has been a change in business model. Financial liabilities cannot be reclassified.

### Derivative financial instruments

All derivative instruments of the group are recorded on the balance sheet at fair value. Positive and negative fair values are reported as assets and liabilities respectively.

Derivative positions are entered into either for trading purposes or as part of the group's asset and liability management activities to manage exposures to interest rate and foreign currency risks. Both realised and unrealised profit or losses arising on derivatives are recognised in the income statement as part of trading income (other than circumstances in which cash flow hedging is applied as detailed in the hedge accounting section below).

Derivative instruments entered into as economic hedges which do not qualify for hedge accounting and derivatives that are entered into for trading purposes are treated in the same way as instruments that are held-for-trading. Credit derivatives are entered into for trading purposes. Credit derivatives are initially recognised at their fair values, being the transaction price of the derivative. Subsequently the derivatives are carried at fair value, with movements in fair value through profit or loss, based on the current market price or remeasured price. The counterparty risk from derivative transactions is taken into account when reporting the fair value of derivative positions. The adjustment to the fair value is known as the credit value adjustment (CVA).

### Hedge accounting

The group applies either fair value or hedge of net investments in foreign operations accounting when the transactions meet the specified hedge accounting criteria. To qualify for hedge accounting treatment, the group ensures that all of the following conditions are met:

- At inception of the hedge, the group formally documents the relationship between the hedging instrument(s) and hedged item(s) including the risk management objectives and the strategy in undertaking the hedge transaction. Also at the inception of the hedge relationship, a formal assessment is undertaken to ensure the hedging instrument is expected to be highly effective in offsetting the designated risk in the hedged item. A hedge is expected to be highly effective if the changes in fair value attributable to the hedged risk during the period for which the hedge is designated are expected to offset in a range of 80% to 125%.
- The effectiveness of the hedge can be reliably measured, i.e.
  the fair value of the hedged item that are attributable to the
  hedged risk and the fair value of the hedging instrument can be
  reliably measured.
- The hedge effectiveness is assessed on an ongoing basis and determined actually to have been highly effective throughout the financial reporting periods for which the hedge was designated.

For qualifying fair value hedges, the change in fair value of the hedging instrument is recognised in the income statement. Changes in fair value of the hedged item that is attributable to the hedged risk are also recognised in the income statement.

### Embedded derivatives

To the extent that a derivative may be embedded in a hybrid contract for a financial liability and the hybrid contract is not carried at fair value with changes in fair value recorded in the income statement, the embedded derivative is separated from the host contract and accounted for as a standalone derivative if and only if:

- The economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract; and
- A separate instrument with the same terms as the embedded derivative would meet the definition of a derivative.

### Offsetting of financial assets and liabilities

Financial assets and liabilities are offset when there is both an intention to settle on a net basis (or simultaneously) and a currently enforceable legal right to offset exists.

(continued)

### Issued debt and equity financial instruments

Financial instruments issued by the group are classified as liabilities if they contain a contractual obligation to deliver cash or another financial asset.

Financial instruments issued by the group are classified as equity where they confer on the holder a residual interest in the group, and the group has no obligation to deliver either cash or another financial asset to the holder. The components of compound issued financial instruments are accounted for separately with the liability component separated first and any residual amount being allocated to the equity component.

Equity instruments issued by subsidiaries of Investec Bank plc are recorded as non-controlling interests on the balance sheet. Equity instruments are initially measured net of directly attributable issue costs.

Treasury shares represent Investec plc shares repurchased by the group which has not been cancelled. Treasury shares are deducted from shareholders' equity and represent the purchase consideration, including directly attributable costs. Where treasury shares are subsequently sold or reissued, net proceeds received are included in shareholders' equity.

Dividends on ordinary shares are recognised as a deduction from equity at the earlier of payment date or the date that it is approved by Investec plc shareholders.

# Sale and repurchase agreements (including securities borrowing and lending)

Securities sold subject to a commitment to repurchase, at a fixed price or a selling price plus a lender's return, remain on balance sheet. Proceeds received are recorded as a liability on balance sheet under 'repurchase agreements and cash collateral on securities lent'. Securities that are purchased under a commitment to resell the securities at a future date are not recognised on the balance sheet. The consideration paid is recognised as an asset under 'reverse repurchase agreements and cash collateral on securities borrowed'.

The difference between the sale and repurchase prices is treated as interest income/expense and is accrued over the life of the agreement using the effective interest method.

Securities borrowing transactions that are not cash collateralised are not included on the balance sheet. Securities lending and borrowing transactions which are cash collateralised are accounted for in the same manner as securities sold or purchased subject to repurchase commitments.

### Financial guarantees

Financial guarantee contracts issued by the group are those contracts that require a payment to be made to reimburse the holder for a loss it incurs because the specified debtor fails to make a payment when due, in accordance with the terms of a debt instrument. Financial guarantees are initially recognised at fair value, adjusted for the transaction costs that are directly attributable to the issuance of the guarantee.

Subsequent to initial recognition, the liability under each guarantee is measured at the higher of the amount recognised less cumulative amortisation and any impairment calculated as set out above. Subsequent to initial measurement, all changes in the balance sheet carrying value are recognised in the income statement.

### An analysis of gross core loans and advances, asset quality and ECL

### Composition of core loans and advances

| £'million  | 31 March<br>2019 | 1 April<br>2018 |

| Risk-weighted assets <sup>^^</sup>  | 14 631            | 13 777          | 13 744            |
| Capital ratios^   |                   |                 |                   |
| Common equity tier 1 ratio  | 11.2%             | 11.3%           | 11.8%             |
| Tier 1 ratio  | 12.9%             | 12.8%           | 13.2%             |
| Total capital ratio   | 17.0%             | 16.0%           | 16.5%             |

<sup>\*</sup> The capital adequacy disclosures for Investec Bank plc include the deduction of foreseeable charges and dividends when calculating common equity tier (CET) 1 capital as required under the Capital Requirements Regulation and European Banking Authority technical standards. These disclosures are different to the capital adequacy disclosures included in the Interim Report, which follow our normal basis of presentation and do not include the deduction for foreseeable charges and dividends when calculating CET 1 capital. Investec Bank plc's CET 1 ratio would be 13bps (31 March 2018: 13bps) higher on this basis.

<sup>^</sup> CET 1, Tier 1 (T1), total capital adequacy ratios and risk-weighted assets are calculated applying the IFRS 9 transitional arrangements.

### A summary of capital adequacy and leverage ratios

|  | 31 March<br>2019* | 1 April<br>2018 | 31 March<br>2018* |
|--|-------------------|-----------------|-------------------|
| Common equity tier 1 (as reported) <sup>oo</sup>         | 11.2%             | 11.3%           | 11.8%             |
| Common equity tier 1 ('fully loaded')^^                  | 10.8%             | 11.0%           | 11.8%             |
| Tier 1 (as reported) <sup>∞</sup>                        | 12.9%             | 12.8%           | 13.2%             |
| Total capital adequacy ratio (as reported) <sup>oo</sup> | 17.0%             | 16.0%           | 16.5%             |
| Leverage ratio** – current                               | 7.9%              | 8.2%            | 8.5%              |
| Leverage ratio** - ('fully loaded')^^                    | 7.7%              | 8.1%            | 8.5%              |
| Leverage ratio – current UK leverage ratio framework^^^  | 10.0%             | 9.8%            | 10.2%             |

<sup>\*</sup> The capital adequacy disclosures for Investec Bank plc include the deduction of foreseeable charges and dividends when calculating CET 1 capital as now required under the Capital Requirements Regulation and European Banking Authority technical standards. These disclosures are different to the capital disclosures included in the Interim Report, which follows our normal basis of presentation and do not include the deduction of foreseeable charges and dividends when calculating CET 1 capital. Investec Bank plc's CET 1 ratio would be 13bps (31 March 2018: 13bps) higher on this basis.

<sup>\*\*</sup> The leverage ratios are calculated on an end-quarter basis.

Based on the group's understanding of current regulations, 'fully loaded' is based on CRR requirements as fully phased in by 2022, including full adoption of IFRS 9. As a result of the adoption of IFRS 9 Investec Bank plc elected to designate its subordinated fixed rate medium-term notes due in 2022 at fair value. By the time of full adoption of IFRS 9 in 2023, these subordinated liabilities will have reached final maturity and will be redeemed at par value. The remaining interest rate portion of the fair value adjustment at 31 March 2019 of £17.7 million (post-taxation), has therefore been excluded from the fully loaded ratios as it will be released into profit and loss over the remaining life of the instrument.

Investec Bank plc is not subject to the UK leverage ratio framework, however, due to recent changes to the UK leverage ratio framework to exclude from the calculation of the total exposure measure those assets constituting claims on central banks where they are matched by deposits accepted by the firm that are denominated in the same currency and of identical or longer maturity, this has been included for comparative purposes.

The reported CET 1, T1 and total capital adequacy amounts and ratios are calculated applying the IFRS 9 transitional arrangements.
