S&P500® Index

The S&P 500 is a free-float capitalization-weighted index published since 1957 of the prices of 500 large-cap common stocks actively traded in the United States. The stocks included in the S&P 500 are those of large publicly held companies that trade on either of the two largest American stock market companies; the NYSE Euronext and the NASDAQ OMX.

After the Dow Jones Industrial Average, the S&P 500 is the most widely followed index of large-cap American stocks. It is considered a bellwether for the American economy, and is included in the Index of Leading Indicators. Some mutual funds, exchange-traded funds, and other funds such as pension funds, are designed to track the performance of the S&P 500 index.

The index has traditionally been market-value weighted; that is, movements in the prices of stocks with higher market capitalizations have a greater effect on the index than companies with smaller market caps. The index is now *float weighted*. That is, Standard & Poor's now calculates the market caps relevant to the index using only the number of shares available for public trading.

The Bloomberg ticker for the S&P500 is SPX.
